Eosinophils In Asthma Perspectives In Asthma Vol 4:

Pathogenic Advances and Therapeutic Perspectives for Eosinophilic Inflammation Florence E. Roufosse, Mats W. Johansson, 2018-12-06 With the recent approval of the first eosinophil depleting therapeutic agents targeting the IL 5 pathway for treatment of severe eosinophilic asthma eosinophils and eosinophilic disorders are in the limelight Indeed setbacks during clinical development of these compounds have revealed how much remains to be known about eosinophil biology in vivo and have nurtured profuse research both on basic eosinophil biology and on pathogenic disease mechanisms in order to better delineate the most meaningful targets for innovative therapeutic strategies On one hand variable degrees of eosinophil depletion observed in some compartments during IL 5 targeted treatment indicate that certain eosinophil subsets may not rely on this cytokine and or that other important pro eosinophilic mediators and signaling pathways are operative in vivo On the other hand it is increasingly clear that disorders involving eosinophils such as asthma are the final outcome of complex interactions between diverse cell types and mediators beyond eosinophils and IL 5 These include type 2 helper T Th2 cells and innate lymphoid cells mast cells and a variety of factors that either activate eosinophils or are released by them Although a considerable amount of research has focused on asthma because it is a common condition and because management of severe asthma remains a major challenge several rare eosinophilic disorders with more homogenous features have proven to be extremely useful models to reach a better understanding of the involvement of eosinophils in tissue damage and dysfunction and of the micro environmental interactions operating within the complex network of eosinophilic inflammation Unraveling this interplay has resulted in advances in the development of molecular tools to detect disease subsets and to monitor therapeutic responses and in identification of promising new therapeutic targets This Research Topic dedicated to eosinophilic conditions covers aspects of the biology of eosinophils and closely related cells of particular relevance for drug development reports on translational research investigating pathogenic mechanisms of specific eosinophilic disorders in humans that will likely result in significant changes in the way patients are managed and presents an overview of the current advancement of targeted drug development for these conditions with a special focus on asthma

The Parallel March of Asthma and Allergy in Childhood: A Multi-Perspective Approach Luis Garcia-Marcos, Carlo Caffarelli, Kostas N Priftis, 2018-07-24 It has not been yet clarified whether allergy and asthma are part of the same condition or they follow a parallel path This Research Topic aims to try and put some light in this parallel march going through crucial topics from prenatal events to later risk factors such as obesity and from basic immunology to immunotherapy both subcutaneous and sublingual We hope the readers can infer their own conclusions as what is first egg or chicken

Cytokines Frances R. Balkwill, 1991 Provides a catalogue of techniques that are applicable to cytokine research The book selects a number of biological models and outlines the ways of assaying cytokine activity in these systems Also covered is cytokine production at the level of messenger RNA and protein Precision Medicine and Immuno-Mediated Inflammatory

asthma Obtain the best results from the newest therapeutics for allergic and immunologic diseases through an expanded discussion of immunotherapy that includes new chapters on Sublingual Immunotherapy Biologics and Immunosuppressives in Asthma and Alternative and Complementary Therapies Frontiers in Clinical Drug Research - Anti-Allergy Agents: Volume 5 Atta-ur-Rahman,2022-04-06 Frontiers in Clinical Drug Research Anti Allergy Agents is a book series comprising of a selection of updated review articles relevant to the recent development of pharmacological agents used for the treatment of allergies The scope of the reviews includes clinical trials of anti inflammatory and anti allergic drugs drug delivery strategies used to treat specific allergies such as inflammation asthma and dermatological allergies lifestyle dependent modes of therapies and the immunological or metabolic mechanisms that are of interest to researchers as targets for new drugs The fifth volume of this series brings 5 reviews which cover the following topics Resistin an irresistible therapeutic target for inflammatory diseases allergy related disorders and cancer Asthma in adults evaluation prevalence and its clinical management Nitrogen containing heterocycles as anti allergy agents Experimental and clinical studies on the effects of nigella sativa and its constituents on allergic and immunological disorders Aspirin desensitization challenge in patients with cardiovascular diseases current trends and advances Frontiers in Clinical Drug Research Anti Allergy Agents will be of interest to immunologists and drug discovery researchers interested in anti allergic drug therapy as the series provides relevant cutting edge reviews written by experts in this rapidly expanding field *Progresses in the Drug Treatment of Chronic Cardiopulmonary Diseases* Xiaohui Li,Djuro Kosanovic,Xiao-Jian Wang,Yunshan Cao,2022-06-06 *Pathophysiology and epidemiology of virus-induced asthma* Hirokazu Kimura,Akihide Ryo,2015-01-26 Virus caused asthma we now call a phenotype of asthma Regardless of the significance and popularity of this disease the etiology of the virus induced asthma have not well understood In addition a few effective vaccines have been applied to prevent respiratory virus infection To solve the issues it is essential to clarify and delineate both aspects of the virus and host defense systems including acute chronic inflammation and airway tissue remodeling To deeply review and discuss pathophysiology and epidemiology of virus induced asthma this topics includes new findings of the host immunity pathology epidemiology and virology of asthma chronic obstructive pulmonary disease COPD We believe that these works are well summarized and informative to glimpse the field of virus associated asthma and COPD and may help understanding the basic and clinical aspects of the diseases

Lung Inflammation in Health and Disease, Volume II Yong-Xiao Wang,2021-05-21 Lung diseases are leading causes of death and disability globally with about 65 million people suffering from COPD and 334 million from asthma Each year tens of millions of people develop and can die from lung infections such as pneumonia and TB Systemic inflammation may induce and exacerbate local inflammatory diseases in the lungs and local inflammation can in turn cause systemic inflammation There is increasing evidence of the coexistence of systemic and local inflammation in patients suffering from asthma COPD and other lung diseases and the co morbidity of two or more local inflammatory diseases often occurs For

example rheumatoid arthritis frequently occurs together with and promotes the development of pulmonary hypertension This co morbidity significantly impacts quality of life and can result in death for some patients Current treatment options for lung disease are neither always effective nor condition specific there is a desperate need for novel therapeutics in the field Additionally the molecular and physiological significance of most major lung diseases is not well understood which further impedes development of new treatments especially in the case of coexistent lung diseases with other inflammatory diseases Great progress has been made in recent years in many areas of the field particularly in understanding the molecular geneses regulatory mechanisms signalling pathways and cellular processes within lung disease as well as basic and clinical technology drug discovery diagnoses treatment options and predictive prognoses This is the first text to aggregate these developments In two comprehensive volumes experts from all over the world present state of the art advances in the study of lung inflammation in health and disease Contributing authors cover well known as well as emerging topics in basic translational and clinical research with the aim of providing researchers clinicians professionals and students with new perspectives and concepts The editors hope these books will also help to direct future research in lung disease and other inflammatory diseases and result in the development of novel therapeutics

Arzneimittel-Forschung, 1990 *Novel Advances in Allergy Diagnosis and Treatment* Simon Blank, Christiane Hilger, 2021-12-20 [Translational Autoimmunity, Volume 3](#) Nima Rezaei, 2022-04-01 *Translational Autoimmunity* Autoimmune Diseases in Different Clinical Settings addresses autoimmunity and associated conditions such as aging infectious diseases cancer neurodegeneration psychological disorders fertility inflammatory vascular diseases and interstitial lung diseases The book addresses sufficiently basic questions on how the immune system is designed to distinguish self from non self and behave such that it is able to maintain self tolerance how does it work in infections and how it elicits an auto reactive state and develops self antigens seen in autoimmune conditions This is followed by an overview on the genetic and clinical aspects of the spectrum of autoimmune diseases which are broadly categorized into two types of organ specific autoimmune diseases and non organ specific autoimmune diseases also known as systemic autoimmune diseases Covers clinical aspects of autoimmunity and translational immunology studies in autoimmunity in different clinical settings Meets the needs of basic scientists clinicians translational scientists and industry partners Supported by a systematic appraisal of the most recent evidence
