The casebook provides a smooth introduction to the complex web of environmental law; twelve self-contained chapters supply comprehensive coverage while giving instructors flexibility in organizing their courses. The detailed policy examination focuses not only on the substance of environmental statutes but also on how they are translated into regulations and how they influence real-world behavior. Effective teaching and study guides appear throughout the book, including charts and diagrams mapping the structure of each of the major environmental statutes, realistic problems and questions, pathfinders explaining where to find crucial source materials for every major subject area, an extensive glossary, and a list of acronyms. This clear text is written with the nonspecialist in mind. A Teacher's Manual provides detailed suggestions for class use, and a website (www.law.umaryland.edu/environment) enables students to learn more about topics of particular interest and to keep up to date on current developments in the field. An annual Statutory Supplement and Internet Guide keep the book current.

Significant changes to Superfund liability from the Superfund Recycling Equity Act and the Small Business Liability Relief and Brownfields Revitalization Act, the latest developments in EPA's long-running saga concerning the definition of solid waste, new problem exercises on the risks of transporting and storing high-level nuclear waste in a central repository in Yucca Mountain, Nevada, on the controversy over regulation of arsenic in drinking water, and on establishing total maximum daily loadings to control non-point source pollution.
