of epilepsy which began with the introduction of Bromides and Hughlings Jackson's definition of epilepsy in 1860. This thought-provoking book comprehensively covers the definitions of and the attitudes to epilepsy over the past 150 years and describes the bureaucracies surrounding the condition. It explores the technological advances and the different management techniques with antiepileptic drugs and surgery which have been applied to epilepsy up to the present day. After presenting an overview both of the advances and improvements made and also of the dark side which has cast shadows over medical and social progress, the authors then critically examine on-going research into new treatments for epilepsy and provide an insight into the complex underpinnings of scientific and medical practice. They look forward to a time when the condition will no longer be as Temkin put it, a paradigm of the suffering of both body and soul in disease. *Transactions of the Section on Nervous and Mental Diseases of the American Medical Association at the ...
