Congress. Senate. Committee on Small Business and Entrepreneurship, 2004 Trading with the Enemy Hugo Meijer, 2016-03-01 In light of the intertwining logics of military competition and economic interdependence at play in US China relations Trading with the Enemy examines how the United States has balanced its potentially conflicting national security and economic interests in its relationship with the People's Republic of China PRC **Use of Lightweight Materials in 21st Century Army Trucks** National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Committee on Lightweight Materials for 21st Century Army Trucks, 2003-04-02 In order to achieve the Army's envisioned Objective Force related to deployability transportability and mobility the Committee on Lightweight Materials for the 21st Century Army Trucks was asked to identify research and technology development opportunities related to the introduction of new lightweight structural materials for light medium and heavy Army trucks Fortifying China Tai Ming Cheung, 2013-02-01 Fortifying China explores the titanic struggle to turn China into an aspiring world class military technological power The defense

economy is leveraging the country's vibrant civilian economy and gaining access to foreign sources of technology and know how. Drawing on extensive Chinese language sources, Tai Ming Cheung explains that this transformation has two key dimensions. The defense economy is being reengineered to break down bureaucratic barriers and reduce the role of the state, fostering a more competitive and entrepreneurial culture to facilitate the rapid diffusion and absorption of technology and knowledge. At the same time, the civilian and defense economies are being integrated to form a dual-use technological and industrial base. In Cheung's view, the Chinese authorities believe this strategy will play a key role in supporting long-term defense modernization. For China's neighbors and the United States, understanding China's technological, industrial, and military capabilities is critical to the formulation of economic and security policies.

**Fortifying China** provides crucial insight into the impact of China's dual-use technology strategy. Cheung's systems of innovation framework considers the structure, dynamics, and performance of the defense economy from a systems-level perspective.

**Linkages** National Research Council, Division on Engineering and Physical Sciences, Board on Manufacturing and Engineering Design, Committee on Manufacturing Trends in Printed Circuit Technology, 2006-01-19. Over the past two decades, the Department of Defense has been moving toward commercial-military integration for manufacturing, while at the same time, the printed circuit board industry has been moving steadily offshore. Today, many in DoD, the U.S. Congress, and the federal government lack a clear understanding of the importance of high-quality, trustworthy printed circuit boards (PrCBs) for properly functioning weapons and other defense systems and components. To help develop this understanding, DOD requested the NRC to identify and assess the key issues affecting PrCBs for military use. This report presents a discussion of how to ensure DOD's access to reliable printed circuits, an assessment of its vulnerability to the global printed circuit supply chain, and suggestions about ways to secure the design and manufacture of printed circuits. In addition, this report offers recommendations to help DoD: 1) preserve existing systems capabilities; 2) improve the military's access to currently available PrCBs; and 3) ensure access to future PrCB technology. The recommendations reflect the need to achieve these goals at reasonable cost and in concert with evolving environmental regulations.

**Buying Commercial: Gaining the Cost/Schedule Benefits for Defense Systems**, 2009-11. Offers important considerations for the DoD for acquisition of commercial systems. Purchasing commercial or other government off-the-shelf and commercial or foreign derivative systems presents a significant opportunity to DoD. The challenge is to reap the advantages such as predictable and lower costs, short realization schedules, low risk, and demonstrated performance without the missed benefits that previous attempts have experienced. This study cites a number of issues related to the certification and qualification of commercial technologies to meet military requirements. The report makes a recommendation to address these issues in the areas of acquisition practices, experience, education, communication, organization, and leadership.

**Retooling Manufacturing** National Research Council, Division on Engineering and Physical Sciences, National Materials Advisory Board, Board on Manufacturing and Engineering Design, Committee on Bridging Design

and Manufacturing,2004-09-30 As the Department of Defense continues development of the future warrior system the difficulty of moving rapidly from design to manufacturing for complex technologies is becoming a major concern In particular there are communication gaps between design and manufacturing that hinder rapid development of new products important for these future military developments To help address those concerns DOD asked the NRC to develop a framework for bridging these gaps through data management modeling and simulation This report presents the results of this study It provides a framework for virtual design and manufacturing and an assessment of the necessary tools an analysis of the economic dimensions an examination of barriers to virtual design and manufacturing in the DOD acquisition process and a series of recommendations and research needs      *Component Reliability for Electronic Systems* Titu I. Băjenescu,Marius I. Bâzu,2010 The main reason for the premature breakdown of today s electronic products computers cars tools appliances etc is the failure of the components used to build these products Today professionals are looking for effective ways to minimize the degradation of electronic components to help ensure longer lasting more technically sound products and systems This practical book offers engineers specific guidance on how to design more reliable components and build more reliable electronic systems Professionals learn how to optimize a virtual component prototype accurately monitor product reliability during the entire production process and add the burn in and selection procedures that are the most appropriate for the intended applications Moreover the book helps system designers ensure that all components are correctly applied margins are adequate wear out failure modes are prevented during the expected duration of life and system interfaces cannot lead to failure      *Strategic Long-Term Participation by DoD in Its Manufacturing USA Institutes* National Academies of Sciences, Engineering, and Medicine,Division on Engineering and Physical Sciences,National Materials and Manufacturing Board,Committee on Strategic Long-Term Participation by DoD in Its Manufacturing Innovation Institutes,2019-08-01 To effectively mature and transition DoD manufacturing science and technology advances into production DoD must have access to a robust and responsive U S industrial base which is often driven by advanced manufacturing technologies The Manufacturing USA institutes are considered crucial and game changing catalysts that are bringing together innovative ecosystems in various technology and market sectors critical to DoD and the nation Since 2012 DoD has invested 600 million directly in its Manufacturing USA institutes with the understanding that the initial federal investment included 1 core funding and 2 one time start up funding to establish the institutes within a period of 5 to 7 years As the institutes now begin to reach year five DoD is evaluating the effectiveness of the institutes in fulfilling their goals and the best on going roles for the federal government including on going funding options to ensure optimal benefit to U S competitiveness This report reviews the role of DoD s investment to date in establishing its eight institutes as public private partnerships and its engagement with each institute after it has matured beyond the start up period      *Opportunities in Protection Materials Science and Technology for Future Army Applications* National Research Council,Division on Engineering and Physical

Sciences, Board on Army Science and Technology, National Materials Advisory Board, Committee on Opportunities in Protection Materials Science and Technology for Future Army Applications, 2011-08-27 Armor plays a significant role in the protection of warriors During the course of history the introduction of new materials and improvements in the materials already used to construct armor has led to better protection and a reduction in the weight of the armor But even with such advances in materials the weight of the armor required to manage threats of ever increasing destructive capability presents a huge challenge Opportunities in Protection Materials Science and Technology for Future Army Applications explores the current theoretical and experimental understanding of the key issues surrounding protection materials identifies the major challenges and technical gaps for developing the future generation of lightweight protection materials and recommends a path forward for their development It examines multiscale shockwave energy transfer mechanisms and experimental approaches for their characterization over short timescales as well as multiscale modeling techniques to predict mechanisms for dissipating energy The report also considers exemplary threats and design philosophy for the three key applications of armor systems 1 personnel protection including body armor and helmets 2 vehicle armor and 3 transparent armor Opportunities in Protection Materials Science and Technology for Future Army Applications recommends that the Department of Defense DoD establish a defense initiative for protection materials by design PMD with associated funding lines for basic and applied research The PMD initiative should include a combination of computational experimental and materials testing characterization and processing research conducted by government industry and academia
