Handbook of Computational Social Science, Volume 2 Uwe Engel, Anabel Quan-Haase, Sunny Liu, Lars

Lyberg, 2021-11-10 The Handbook of Computational Social Science is a comprehensive reference source for scholars across multiple disciplines. It outlines key debates in the field showcasing novel statistical modeling and machine learning methods and draws from specific case studies to demonstrate the opportunities and challenges in CSS approaches. The Handbook is divided into two volumes written by outstanding internationally renowned scholars in the field. This second volume focuses on foundations and advances in data science, statistical modeling and machine learning. It covers a range of key issues including the management of big data in terms of record linkage, streaming and missing data, Machine learning, agent based and statistical modeling as well as data quality in relation to digital trace and textual data as well as probability, non probability and crowdsourced samples represent further foci. The volume not only makes major contributions to the consolidation of this growing research field but also encourages growth into new directions. With its broad coverage of perspectives, theoretical, methodological, computational, international scope and interdisciplinary approach, this important resource is integral reading for advanced undergraduates, postgraduates and researchers engaging with computational methods across the social sciences as well as those within the scientific and engineering sectors.

On Round-Off Errors in Linear Programming

H. Müller-Merbach, 2012-12-06 Due to the limited number of digits or bits per storage location in electronic computers, round off errors arise during arithmetic operations. Depending upon the kind of operation, the structure of the data and the skillfulness of the program, these errors increase and spread out more or less quickly during a continued computation process in which the computed data affected by errors are themselves used for generating new data. The purpose of this investigation was to learn about the increase of round off errors in linear programming procedures. Less attention was paid to the theory of round off errors or to the effectiveness of error elimination procedures. In regard to these questions, the results of investigations which have been made on round off errors in a more general context dealing with matrix inversion and eigenvalue problems could be used for the purposes of this paper. The emphasis of this investigation lay rather on studying the behavior of typical linear programming problems from the point of view of error cumulation.

Accuracy and Stability of Numerical Algorithms Nicholas J. Higham, 2002-01-01 Accuracy and Stability of Numerical Algorithms gives a thorough

up to date treatment of the behavior of numerical algorithms in finite precision arithmetic. It combines algorithmic derivations, perturbation theory and rounding error analysis all enlivened by historical perspective and informative quotations. This second edition expands and updates the coverage of the first edition 1996 and includes numerous improvements to the original material. Two new chapters treat symmetric indefinite systems and skew symmetric systems and nonlinear systems and Newton's method. Twelve new sections include coverage of additional error bounds for Gaussian elimination, rank

Direction Cosine Computational Error John W. Jordan, 1969 Strapdown inertial systems possess a potential advantage over more conventional inertial systems since they do not require a mechanical gimbal structure to maintain a stable coordinate reference Instead strapdown systems replace the gimbal structure by a direction cosine matrix which is contained in and updated by the system computer To assess the performance of a strapdown system or to determine the computer requirements a detailed study of the computational error introduced by the computer is necessary This report is concerned with the techniques which may be employed to estimate the computational error and its effects on system performance Although focused upon a particular problem of practical importance many of the techniques have a wider applicability to aerospace in general
