

conference but expanded and rethought versions of them. Because of its multi-author, multi-subject, multi-disciplinary format it cannot, of course, contain any consistent exposition or overview of the subject. Experts in any particular aspect will probably already have met the information here and the word 'up-to-date' might fairly have replaced 'new' in the subtitle. The book's appeal, therefore, will be to those who are already concerned with the subject but wish to have its growing points all brought together. Anybody concerned to know where we are at in alcoholism can read it with confidence. The publishers have stuck a high price on it, and readers may rightly complain that a book as expensive as this should have its printed lines justified. I hope this will not prevent it from having the wide readership it deserves because of its breadth of coverage and the clarity of its content.

I pose one question. Will the Colleges of Physicians and Psychiatrists, whose Presidents proclaim the subject matter to be so important, be doing anything to foster the inclusion of its information and ideas in postgraduate training programmes and to garner the fruits in examinations over which they exert an influence? I doubt it. Well, it may happen in Regents Park where *serk. sup.* does not always pass unheeded, as the latest number of the *Journal of the Royal College of Physicians* bears witness.

Depression and Schizophrenia: A Contribution on their Chemical Pathologies. By H. M. VAN PRAAG. London: SP Medical & Scientific Books. 1977. Pp 274. £15.00.

The most widely supported hypotheses for affective disorder and schizophrenia implicate dysfunction of aminergic systems of one kind or another. Reduced activity in serotonergic or noradrenergic neurones is usually postulated for affective illness, whilst the transmethylation hypothesis, increased dopaminergic or reduced noradrenergic activities are usually proposed for schizophrenia. Of the two areas of inquiry, that into the affective disorders is the more developed from the points of view of the amount of information accumulated on the characteristics and accompaniments of these conditions, and on the properties of the various antidepressant drugs.

The point has now been reached where this corpus of knowledge has become increasingly difficult to reconcile with the initial amine hypothesis for affective disorders, and it is becoming clear that new

ideas need to be formulated and tested. The present hypotheses for schizophrenia look equally attractive or unattractive, depending on your point of view.

At this interesting stage in the development of research into these two groups of illnesses, this volume is to be welcomed, and Professor van Praag is a distinguished and thoughtful investigator who has contributed to the knowledge of both.

Here he has summarized the main data on amines currently available and relevant to the functional psychoses, and he has tried to evaluate complex and often puzzling findings in this difficult area. The method of marshalling material has tended to keep each logical step to a brief chapter so that the reader is led relatively painlessly through the mass of information and can more easily follow the progression of the arguments. This book should be of use to a wide spectrum of readers.

Hashish. Studies of Long-Term Use. Edited by COSTAS STEFANIS, RHEA DORNBUSH, and MAX FINE. New York: Raven Press. 1977. Pp 195. \$15.00.

Some problems are by their nature resistant to scientific investigation. The epidemiology of illicit actions is one of these, and the experimental study of the effects of long-term illicit behaviour is little easier; but Dr Stefanis and his collaborators have come as close as possible to making a really valuable contribution to our knowledge of one such kind of behaviour—the long-term use of hashish. Because the methodological problems (chiefly the correct definition, discovery and persuasion of cases and controls to collaborate) are virtually insoluble, there is never likely to be general agreement about the result of any studies in this field, particularly when the results run against the judge's own prejudice. However, there have now been several studies in addition to this one in Greece (for example in Costa Rica, India and Egypt), and the major conclusions of the present authors regarding all of them are worth quoting from page 156: 'The studies fail to define an inherent toxicity to the nervous system, mental status, or medical complications for long-term cannabis use. Differences among the studies are seen largely in the incidence of psychopathologic abnormalities.' The chicken and egg controversy is not likely to be resolved by these, nor indeed by any studies that employ a retrospective method for case finding. (As good a brief summary of present knowledge as one is likely to find is contained in the Drug Link Informa-

Ritsner,2009-04-21 Neuropsychiatric disorders such as schizophrenia mood disorders Alzheimer s disease epilepsy alcoholism substance abuse and others are one of the most debilitating illnesses worldwide characterizing by the complexity of the causes and lacking the laboratory tests that may promote diagnostic and prognostic procedures Recent advances in neuroscience genomic genetic proteomic and metabolomic knowledge and technologies have opened the way to searching biomarkers and endophenotypes which may offer powerful and exciting opportunity to understand the etiology and the underlying pathophysiological mechanisms of neuropsychiatric disorders The challenge now is to translate these advances into meaningful diagnostic and therapeutic advances This book offers a broad synthesis of the current knowledge about diverse topics of the biomarker and

endophenotype strategies in neuropsychiatry The book is organized into four interconnected volumes Neuropsychological Endophenotypes and Biomarkers with overview of methodological issues of the biomarker and endophenotype approaches in neuropsychiatry and some technological advances Neuroanatomical and Neuroimaging Endophenotypes and Biomarkers Metabolic and Peripheral Biomarkers and Molecular Genetic and Genomic Markers The contributors are internationally and nationally recognized researchers and experts from 16 countries This four volume handbook is intended for a broad spectrum of readers including neuroscientists psychiatrists neurologists endocrinologists pharmacologists clinical psychologists general practitioners geriatricians health care providers in the field of neurology and mental health interested in trends that have crystallized in the last decade and trends that can be expected to further evolve in the coming years It is hoped that this book will also be a useful resource for the teaching of psychiatry neurology psychology and mental health *Mechanisms and New Targets for the Treatment of Chronic Pain* Milica S. Prostran, Francisco R. Nieto, Sonja Maksim Vuckovic, 2020-12-03 Acute pain has a physiological protective role in preventing tissue damage However pain can become chronic due to a multitude of pathophysiological states such as trauma inflammation neural injury viral infection cancer autoimmune diseases and vascular and metabolic disorders These pathological states can trigger alterations of the pain pathways that can lead to hypersensitivity and in such circumstances pain loses its protective role and instead becomes persistent and debilitating affecting seriously to the quality of life of patients Chronic pain is one of the most important health problems worldwide It has been estimated that 10% of adults are diagnosed with chronic pain each year However despite the high prevalence of chronic pain its management is still no fully satisfactory probably due to the variety of chronic pain conditions with different etiologies neuropathic visceral and musculoskeletal pain and because their pathophysiological mechanisms are only partially known Therefore there is a huge need for new effective therapies for the control and or prevention of the different types of chronic pain Chronic pain is associated with plastic changes in pain circuits of the peripheral and central nervous system including changes in the expression of ion channels neurotransmitters and receptors In addition there is growing consensus on non neuronal mechanisms that can amplify or resolve chronic pain and cells traditionally thought to act just as coordinators of the inflammatory response such as immune and glial cells are now accepted as real modulators of pain signaling In this regard animal models of persistent pain such as models of neuropathic and visceral pain and models of arthritis are helping to elucidate our understanding of the pathogenesis of chronic pain and make it possible to test experimental treatments *Marijuana and Madness* David Castle, Robin M. Murray, Deepak Cyril D'Souza, 2011-10-27 The second edition of this critically acclaimed and award winning text provides a comprehensive overview of the psychiatry and neuroscience of Cannabis sativa marijuana It outlines the very latest developments in our understanding of the human cannabinoid system and links this knowledge to clinical and epidemiological facts about the impact of cannabis on mental health Clinically focused chapters review not only the direct psychomimetic properties of cannabis but also the impact

consumption has on the courses of evolving or established mental illnesses such as schizophrenia Effects of cannabis on mood are reviewed as are its effects on cognition This new edition has been extensively updated and expanded with ten new chapters to incorporate major new research findings This book will be of interest to all members of the mental health team as well as to neuroscientists epidemiologists public health specialists and those involved in drug and alcohol research
