**Media Studies** Paul Marris, Sue Thornham, 2000-03. Media Studies A Reader provides a thorough introduction to the full range of theoretical perspectives on the mass media from the past thirty years. Ranging from the arguments between the American mass communication tradition and the Europe-centered Frankfurt School of the 1940s to the analyses of communication technologies by Marshall McLuhan and Raymond Williams in the 1960s, Media Studies A Reader maps the mass media field, its varied and often conflicting histories, and its current debates. Sixty-five articles provide comprehensive coverage of all the main theorists and approaches. The first half, *Studying the Media*, explores in detail three core elements of media studies: production and regulation of mass media, media texts and reception, and consumption of media. The second half brings together concrete examples of how theoretical debates can be realized in a series of case studies on soap operas, the news, and advertising. A general introduction and introductions to each section summarize and contextualize the debates. Contributors include Theodor W. Adorno, Marshall McLuhan, Raymond Williams, Stuart Hall, Annette Kuhn, Jürgen Habermas, John Fiske, Richard Dyer, Niki Strange, Danae Clark, Angela McRobbie, Bill Nichols, Lynne Joyrich, David Morley, Ien Ang, Janice Radway, Henry Jenkins, Tania Modleski, Anne McClintock, Sadie Plant.

**The Uncanny Muse** David Hajdu, 2025-02-04. One of Literary Hub's Most Anticipated Books of 2025. An acclaimed critic, journalist, and songwriter, musician, tells the story of art's relation to machines from the Baroque period to the age of AI. What does it mean to be human in a world where machines too can be artists? The Uncanny Muse explores the history of automation in the arts and delves into one of the most momentous and controversial aspects of AI: artificial creativity. The adoption of technology and machinery has long transformed the world, but as the potential for artificial intelligence expands, David Hajdu examines the new, increasingly urgent questions about technology's role in culture. From the life-size mechanical doll that made headlines in Victorian London to the doll's modern AI pop star counterpart, Hajdu traces the fascinating, varied ways in which inventors and artists have sought to emulate mental processes and mechanize creative production. For decades, machines and artists have engaged in expressing the human condition along with the condition of living with machines through player pianos, broadcasting technology, electric organs, digital movie effects, synthesizers, and motion capture. By communicating and informing human knowledge, the

machines have exerted considerable influence on the history of art and often more influence than humans have been willing to recognize As Hajdu proclaims before machine learning there was machine teaching With thoughtful wide ranging and surprising turns from Berry Gordy and George Harrison to Andy Warhol and Stevie Wonder David Hajdu takes a novel and contrarian approach he sees how machines through the ages have enabled creativity not stifled it and *The Uncanny Muse* sees no reason why this shouldn't be the case with AI today

*The Oxford Handbook of Media, Technology, and Organization Studies* Timon Beyes, Robin Holt, Claus Pias, 2019-12-17 Our most basic relationship with the world is one of technological mediation Nowadays our available tools are digital and increasingly what counts in economic social and cultural life is what can be digitally stored distributed replayed augmented and switched Yet the digital remains very much materially configured and though it now permeates nearly all human life it has not eclipsed all older technologies This Handbook is grounded in an understanding that our technologically mediated condition is a condition of organization It maps and theorizes the largely uncharted territory of media technology and organization studies Written by scholars of organization and theorists of media and technology the chapters focus on specific and specifically mediating objects that shape the practices processes and effects of organization It is in this spirit that each chapter focuses on a specific technological object such as the Battery Clock High Heels Container or Smartphone asking the question how does this object or process organize In staying with the object the chapters remain committed to the everyday empirical world rather than being confined to established disciplinary concerns and theoretical developments As the first sustained and systematic interrogation of the relation between technologies media and organization this Handbook consolidates deepens and further develops the empirics and concepts required to make sense of the material forces of organization
