Tribology in Electrical Environments H. Prashad, 2005-12-12 This book summarises work done and experience gained over the past three decades in the area of tribology in electrical environments It takes a close look at behaviour and response characteristics of rolling element and hydrodynamic journal thrust bearings working under the influence of electrical current Detailed analysis plugs the existing knowledge gaps in the area of tribology in electrical environments This is because the genesis of intermolecular forces during tribological interaction involves electrostatic attraction or repulsion that creates electro dynamic magnetic and exchange forces between atoms Therefore all tribological phenomena occurring in any interacting system is electrical in nature Keep your collection up to date with the latest volume from Elsevier s Tribology and Interface Engineering Book Series Includes real life case studies

Microscopic Aspects of Adhesion and Lubrication J.M. Georges, 1982-04-01 Microscopic Aspects of Adhesion and Lubrication

Solving Tribology Problems in Rotating Machines H. Prashad, 2006-01-31 Bearings are widely used in rotating machines Understanding the factors affecting their reliability and service life is essential in ensuring good machine design and performance Solving tribology problems in rotating machines reviews these factors and their implications for improved machine performance The first two chapters review ways of assessing the performance and reliability of rolling element bearings The author then goes on to discuss key performance problems and the factors affecting bearing reliability There are chapters on cage and roller slip and particular types of failure in equipment such as alternators condensers and pumps The author also reviews the effects of such factors as localised electrical currents seating clearance grades of lubricant axial forces vibration on performance and service life The book concludes by reviewing ways of improving bearing design Solving tribology problems in rotating machines is an essential reference for engineers involved in the design and operation of rotating machines in such sectors as power generation electrical and automotive engineering Discusses improved machine performance Examines factors affecting bearing reliability An essential reference for engineers

Acoustic Emission in Friction Victor M. Baranov, Evgeny M. Kudryavtsev, Gennady .A. Sarychev, Vladimir M. Schavelin, 2011-07-29 Acoustic Emission in Friction is devoted to acoustic mainly ultrasonic emission that occurs in friction of machine components Its crucial novelty is in systematizing the advances in its use for monitoring technical systems especially in the important nuclear power industry Written by four well known experts from the main nuclear research university in Russia this book covers the following areas All the sources of acoustic emission in friction The theory of acoustic emission The effects of surface conditions load and velocity on acoustic emission The equipment for registration and monitoring of acoustic emission Unique data from acoustic emission control under various testing conditions in friction units of machinery for nuclear

industry machinery There is much emphasis on the comparatively new and rapidly developing tribology of nuclear power engineering Although a substantial part of the experimental data relates to this specific field of engineering the universality of the method is shown and its application is possible wherever the field inspection of friction units is necessary Calculation expressions describing main characteristics of AE registered in friction units Describes new set ups for studying the tribological behaviour of nuclear engineering materials Presents the theory of the acoustic emission method in friction units

Lees' Loss Prevention in the Process Industries Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world's chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed
