This pathbreaking volume synthesizes a rich knowledge base from across disciplines including neurobiologic, genetic, biobehavioral, clinical, narrative, substance abuse, health services, ethical and policy perspectives for a deeper understanding of the impact of pain on individual lives and the larger society. Its international panel of contributors highlights special issues and review best practice guidelines from placebo effects to cancer, Whiplash Associated Disorders to pain imaging to complementary medicine, phantom limb pain to gene therapies to AIDS. Among the topics covered: The distinction between acute and chronic pain is it clinically useful? Improving clinical assessment of patients with pain. Age and sex differences in pain. The what, how and why of the placebo and nocebo effect. Psychosocial and partner assisted biopsychosocial interventions for disease related pain. Substance abuse issues in pain treatment.
