

Thermal Degradation

Depending upon the presence of oxygen, temperature and structure of polymer, degradation and/or oxidation reactions will occur.

Theoretical point of view most commercial polymer systems should be relatively stable above their melting point in the absence of oxygen.

It is interesting to note that saturated hydrocarbons are much more stable than polyethylene (PE) in the absence of oxygen as are chloroalkanes when compared with PVC.

$$T_{\text{deg PE}} < T_{\text{deg Butadecane}}$$

or

$$T_{\text{deg PVC}} < T_{\text{deg 2,4,6-trichloroheptane}}$$

In some cases this temperature difference may be as high as 200°C. There are mainly two reasons for this difference in behavior;

- The first of which is simply that polymers by virtue of long chain nature are able to breakdown into smaller molecular fragments i.e. monomer formation via unzipping reactions

Elias, 2013-11-11 The second edition of this textbook is identical with its fourth German edition and it thus has the same goals precise definition of basic phenomena a broad survey of the whole field integrated representation of chemistry physics and technology and a balanced treatment of facts and comprehension The book thus intends to bridge the gap between the often oversimplified introductory textbooks and the highly specialized texts and monographs that cover only parts of macromolecular science The text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties

depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions
