Financial Engineering Ecommerce And Supply Chain:

Financial Engineering, E-commerce and Supply Chain Panos M. Pardalos, Vassilis Tsitsiringos, 2013-06-29 One of the fast growing elements of the Internet is electronic commerce which refers to the use of electronic means to conduct business transactions within or across business entities Nearly 80 percent of all Fortune 500 companies have been doing their core business through the Internet Many issues and societal implications of electronic commerce are the subjects of recent research A supply chain consists of all the entities and activities that enable the production distribution and delivery of products and services to consumers Research in designing and managing supply chains has rapidly expanded during the last decade In addition increased and accessible computing power and modeling capabilities have spurred this growth enabling researchers to simultaneously consider the many interrelated variables and decisions of a supply chain in a single tractable model

Computational Methods in Financial Engineering Erricos Kontoghiorghes, Berc Rustem, Peter Winker, 2008-02-26 Computational models and methods are central to the analysis of economic and financial decisions Simulation and optimisation are widely used as tools of analysis modelling and testing The focus of this book is the development of computational methods and analytical models in financial engineering that rely on computation The book contains eighteen chapters written by leading researchers in the area on portfolio optimization and option pricing estimation and classification banking risk and macroeconomic modelling It explores and brings together current research tools and will be of interest to researchers analysts and practitioners in policy and investment decisions in economics and finance

Biodiversity Wilhelm Barthlott, Matthias Winiger, 1998-03-18 The preservation of biodiversity is an essential part of the global concept for sustainable development Ecologically and socially acceptable management of biodiversity is a prerequisite for the preservation of the wealth and productivity of natural ecological systems and maintenance of the cultural differences in the relationship between man and nature The Agenda 21 adopted at the Rio Summit in 1992 calls for concerted action by governments governmental and non governmental organizations and the scientific community for the preservation of biodiversity

Handbook of Smart Energy Systems Michel Fathi, Enrico Zio, Panos M. Pardalos, 2023-08-04 This handbook analyzes and develops methods and models to optimize solutions for energy access for industry and the general world population alike in terms of reliability and sustainability With a focus on improving the performance of energy systems it brings together state of the art research on reliability enhancement intelligent development simulation and optimization as well as sustainable development of energy systems It helps energy stakeholders and professionals learn the methodologies needed to improve the reliability of energy supply and demand systems achieve more efficient long term operations deal with uncertainties in energy systems and reduce energy emissions Highlighting novel models and their applications from leading experts in this important area this book will appeal to researchers students and engineers in the various domains of smart energy systems and encourage them to pursue research and development in this exciting and highly relevant field

Optimal Financial Decision Making under Uncertainty Giorgio Consigli, Daniel Kuhn, Paolo Brandimarte, 2016-10-17

The scope of this volume is primarily to analyze from different methodological perspectives similar valuation and optimization problems arising in financial applications aimed at facilitating a theoretical and computational integration between methods largely regarded as alternatives. Increasingly in recent years financial management problems such as strategic asset allocation, asset liability management as well as asset pricing problems have been presented in the literature adopting formulation and solution approaches rooted in stochastic programming, robust optimization, stochastic dynamic programming including approximate SDP methods as well as policy rule optimization, heuristic approaches and others. The aim of the volume is to facilitate the comprehension of the modeling and methodological potentials of those methods, thus their common assumptions and peculiarities, relying on similar financial problems. The volume will address different valuation problems common in finance related to asset pricing, optimal portfolio management, risk measurement, risk control and asset liability management. The volume features chapters of theoretical and practical relevance, clarifying recent advances in the associated applied field from different standpoints, relying on similar valuation problems and as mentioned, facilitating a mutual and beneficial methodological and theoretical knowledge transfer. The distinctive aspects of the volume can be summarized as follows: Strong benchmarking philosophy with contributors explicitly asked to underline current limits and desirable developments in their areas; Theoretical contributions aimed at advancing the state of the art in the given domain with a clear potential for applications; The inclusion of an algorithmic computational discussion of issues arising on similar valuation problems across different methods; Variety of applications: rarely is it possible within a single volume to consider and analyze different and possibly competing alternative optimization techniques applied to well identified financial valuation problems; Clear definition of the current state of the art in each methodological and applied area to facilitate future research directions.

Financial Decision Aid Using Multiple Criteria Hatem Masri, Blanca Pérez-Gladish, Constantin Zopounidis, 2018-01-17 This volume highlights recent applications of multiple criteria decision making MCDM models in the field of finance. Covering a wide range of MCDM approaches including multiobjective optimization, goal programming, value based models, outranking techniques and fuzzy models, it provides researchers and practitioners with a set of MCDM methodologies and empirical results in areas such as portfolio management, investment appraisal, banking and corporate finance among others. The book addresses issues related to problem structuring and modeling, solution techniques, comparative analyses as well as combinations of MCDM models with other analytical methodologies.

Advances in Computational Intelligence and Its Applications Sheikh Fahad Ahmad, Shadab Siddiqui, Rajib Debnath, Kakali Das, Figlu Mohanty, Sumit Hazra, 2024-06-07 It is with great pleasure and enthusiasm that we welcome you to the International Conference on Advances in Computational Intelligence and its Applications ICACIA 2023. In the ever evolving landscape of technology, computational intelligence stands as a cornerstone shaping the future of diverse fields and industries. This conference serves as a nexus for researchers

Digitalization of Decentralized Supply Chains During Global Crises Taghipour, Atour, 2021-06-18 During global crises apart from humanitarian concerns at the economic level supply chains around the world can be impacted These crises can cause huge uncertainties in both the supply and demand parts of supply chains On one side the demand for some products and services can be reduced On the other side manufacturers around the world are facing shortages of supplies of raw materials and parts because of interruptions in production disruptions to transportation and labor shortages In this context organizations start to re examine their production and service systems based on digitization of operations to not only mitigate the risk but also to build a resilient supply chain while continuing to reduce costs and maximize profits The question that can be asked is how the decentralized supply chains can integrate new technologies to compete in a risky environment in global crises Digitalization of Decentralized Supply Chains During Global Crises provides new approaches of digitalization of decentralized supply chains and industries to help researchers educators consultants and practitioners deal with global crises and improve the global performance of supply chains Important topics covered include blockchain internet of things 3D technologies and Industry 4 0 technologies within the context of digital supply chains This book is important for supply chain managers manufacturers producers logistics personnel economists practitioners stakeholders researchers academicians and students
