How to Manage Value-Added Tax Refunds Mario Pessoa, Andrew Okello, Artur Swistak, Muyangwa Muyangwa, Virginia Alonso-Albarran, Vincent de Paul Koukpaizan, 2021-05-10 The value added tax (VAT) has the potential to generate significant government revenue. Despite its intrinsic self-enforcement capacity, many tax administrations find it challenging to refund excess input credits, which is critical to a well-functioning VAT system. Improperly functioning VAT refund practices can have profound implications for fiscal policy and management, including inaccurate deficit measurement, spending overruns, poor budget credibility, impaired treasury operations and arrears accumulation. This note addresses the following issues: 1. What are VAT refunds and why should they be managed properly? 2. What practices should be put in place in tax policy, tax administration, budget and treasury management, debt and fiscal statistics to help manage key aspects of VAT refunds? For a refund mechanism to be credible, the tax administration must ensure that it is equipped with the strategies, processes and abilities needed to identify VAT refund fraud. It must also be prepared to act quickly to combat such fraud schemes.

Federal Register, 1990-12-21 Capital Markets and Institutions Linda Allen, 1997-01-31 Intended for Junior/Senior MBA course in Financial Markets. Capital Markets and Institutions Using an international focus, this text integrates the financial markets with the activities of financial intermediaries. This approach enables students to understand the role of financial intermediaries in the development of financial markets. Throughout the text, the emphasis is on how things are done on the street. The origins, major participants, pricing and settlements and typical transactions for all financial markets are also included.

The Foundations of Economic Policy Nicola Acocella, 1998-10 Recent developments in public economics have largely been in the direction of reaffirming the limits of the market and of establishing new ones. The possible existence of fundamental non-convexities

imperfect and asymmetric information incentive compatibility imperfect competition strategic complementarity and scale economies led to the conclusion that a large set of market failures exist such situations also imply government failure Acocella considers this complicated picture and provides a discussion of the different approaches to establishing social rankings of the possible situations and the underlying principles The arguments for and against different institutions are then analysed at a micro and macroeconomic level The market and the government are recognised as imperfect and thus complementary institutions Specific policy targets and instruments are considered in the areas of micro and macro economic policy Special attention is devoted to questions of policy management in an open economy Finally problems of domestic and international policy co ordination are considered
