Mishkin, 2016 In recent years we have seen a growing number of banking and financial crises in emerging market countries with great costs to their economies But we now have a much better understanding of why these crises occur and a better idea how they can be prevented Mishkin defines a financial crisis as a disruption in financial markets in which adverse selection and moral hazard problems become much worse so that financial markets are unable to efficiently channel funds to those who have the most productive investment opportunities As financial markets become unable to function efficiently economic activity sharply contracts Factors that promote financial crises include mainly a deterioration in financial sector balance sheets increases in interest rates and in uncertainty and deterioration in nonfinancial balance sheets because of changes in asset prices Financial policies in 12 areas could help make financial crises less likely in emerging market economies says Mishkin He discusses Prudential supervision Accounting and disclosure requirements Legal and judicial systems Market based discipline Entry of foreign banks Capital controls Reduction of the role of state owned financial institutions Restrictions on foreign denominated debt The elimination of too big to fail practices in the corporate sector The proper sequencing of financial liberalization Monetary policy and price stability Exchange rate regimes and foreign exchange reserves If the political will to adopt sound policies in these areas grows in emerging market economies their financial systems should become healthier with substantial gains both from greater economic growth and smaller economic fluctuations This paper a product of the Financial Sector Strategy and Policy Department was prepared for the NBER conference quot Economic and Financial Crises in Emerging Market Economies quot Woodstock Vermont October 19 21 2001 The author may be contacted at fsm3@columbia.edu

Fiscal Affairs Dept., 2024-04-10. Even as the global economic outlook is stabilizing, fiscal policy continues to struggle with legacies of high debt and deficits while facing new challenges. Public finances risks are acute this year as over 80 economies and economic areas are holding elections amid increased support for high government spending. Financing conditions remain challenging while spending pressures to address structural challenges are becoming more pressing. Countries should boost long term growth with a well designed fiscal policy mix to promote innovation more broadly including fundamental research and facilitate technology diffusion. Durable fiscal consolidation efforts are needed to safeguard sustainable public finances and rebuild buffers. **Borrowing Credibility** Jana Grittersova, 2017-07-28. Nations with credible monetary regimes borrow at lower interest rates in international markets and are less likely to suffer speculative attacks and currency crises. While scholars typically attribute credibility to domestic institutions or international agreements, Jana Grittersov argues that when reputable multinational banks headquartered in Western Europe or North America open branches and subsidiaries within a nation, they enhance that nation's monetary credibility. These banks enhance credibility by promoting financial transparency in the local system, improving the quality of banking regulation and supervision, and by serving as private lenders of last resort. Reputable multinational banks provide an enforcement mechanism for publicized economic policies, signaling to international financial markets that the host government is committed to low inflation and

stable currency Grittersov examines actual changes in government behavior of nations trying to gain legitimacy in international financial markets and the ways in which perceptions of these nations change in relation to multinational banks. In addition to quantitative analysis of over 80 emerging market countries she offers extensive case studies of credibility building in the transition countries of Eastern Europe, Argentina in 2001, and the global financial crisis of 2008. Grittersov illuminates the complex interactions between multinational banks and national policymaking that characterize the process of financial globalization to reveal the importance of market confidence in a world of mobile capital.
