

The CO2 LASER:

- Lasers discussed above – use transitions among various excited electronic states of an atom or ion
- CO2 laser – uses transition between different vibrational states of CO2 molecule
- One of the earliest Gas lasers
- Highest power continuous wave laser currently available
- The filling gas within the discharge tube consists primarily of:

Carbon dioxide

Hydrogen

Nitrogen

Helium

(proportions vary according to a specific laser)

F Fluorine, 2013-06-29 The present volume Fluorine Suppt Vol 4 covers the oxygen compounds of fluorine and the binary fluorine nitrogen compounds In the first part Fluorine and Oxygen oxygen fluorides OnF_m are described in the order of decreasing F/O ratio It finishes with a description of hyperfluorous acid HOF The second part Fluorine and Nitrogen deals with the binary fluorine nitrogen compounds They are subdivided on the basis of the number of nitrogen atoms per molecule Thus species such as NF_3 , NF_2 , NF and N_2F_4 are considered first followed by the dinitrogen and 3,2 trinitrogen fluorides N_2F_2 and N_3F_3 and related ions 2,4,2,2,3 The other compounds under the heading Fluorine and Nitrogen the fluorine nitrogen hydrogen and the fluorine nitrogen oxygen hydrogen compounds will be covered in Fluorine Suppt Vol 5 Intense development in the field of inorganic fluorine oxygen and fluorine-nitrogen chemistry began in the middle of the 1950s when in less than a decade numerous previously unknown compounds and a great deal of new information were produced Research in this field was strongly stimulated by interest in these compounds as potential high energy oxidizers for rocket fuels That is also the reason why much of the pertinent chemical information is found in patent literature and U S Government contractor reports Bibliography on the High Temperature Chemistry and Physics of Materials, 1978 NBS Special Publication, 1968 **Publications of Los Alamos Research** Los Alamos National Laboratory, 1983 **Quantum Electronics**, 1979-11-15 Quantum Electronics *Chemi- and Bioluminescence* Burr, 2020-08-18 This book focuses on instrumentation of chemi and bioluminescence and discusses the nature of chemiluminescence as the exothermic oxidation of a substrate organic compound to give an energy rich product that is luminescent It describes the applications of chemiluminescence **Publications of the National Bureau of Standards ... Catalog** United States. National Bureau of Standards, 1978 *Desorption Induced by Electronic Transitions, DIET III* Richard H. Stulen, Michael L. Knotek, 2013-03-08 These proceedings are the result of the third international workshop on Desorption Induced by Electronic Transitions DIET III which took place on Shelter Island NY May 20-22 1987 The work contained in this volume is an excellent summary of the current status of the field and should be a valuable reference text for both seasoned researchers and newcomers in the field of DIET Based on the success of the meeting it seems clear that interest and enthusiasm in the field is strong It is also apparent from the many lively discussions during the meeting that many unanswered questions and controversies remain to be solved It was particularly pleasing to see many new participants from new and rapidly advancing fields ranging from gas phase dynamics to semiconductor processing The resulting cross fertilization from these separate but related fields is playing an important role in helping us understand desorption processes at solid surfaces In general the topics covered during the course of the workshop overlapped those of both DIET I and DIET II However clear advances have been made and in general there is a much more sophisticated understanding of the physics and chemistry of stimulated desorption Of particular note in this regard is the gas phase research highlighted in this workshop by the work of Nenner et al where new results indicate

that in the gas phase photodissociation can precede or compete strongly with autoionization and other electronic relaxation pathways

Compounds with Fluorine and Chlorine

Reinhard Haubold, Peter Merlet, Jörn v. Jouanne, Hannelore Keller-Rudek, Ulrike Ohms-Bredemann, Carol Strametz, Joachim Wagner, Astrid Wietelmann, 1991-11-26 The volume describes all compounds that consist of bromine and fluorine and or chlorine and may additionally contain noble gases hydrogen oxygen and nitrogen The description of chemical and physical properties of binary compounds between bromine and fluorine takes up most of the volume because this class of compounds includes BrF₃ and BrF₅ which have considerable technical interest Especially the oxidizing and fluorinating properties of BrF₃ make it a convenient reactant for the preparation of inorganic fluorides On the other hand the diatomic molecule BrF is well characterized by spectroscopic methods but its chemistry is less known because of its instability Other neutral species such as Br₂F Br₂F₂ BrF₂ and BrF₆ only exist in matrices at low temperatures and the existence of BrF₄ and BrF₇ is even doubted Some of the ions including BrF₂⁺ BrF₂⁻ Br₃F₁₀ BrF₄⁺ BrF₄⁻ BrF₆⁺ and BrF₆⁻ can be stabilized as salts
