**Sir Nevill Mott** Sir Nevill Francis Mott, 1995 This volume contains a discriminating selection of papers with commentaries by one of the most creative theoretical physicists of our century Nobel Laureate Sir Nevill Mott His pioneering contributions 1928 1993 include Fermi liquid theory metal insulator transition the theory of noncrystalline materials high temperature superconductivity and many other discoveries **Excitonic Processes in Solids** Masayasu Ueta, Hiroshi Kanzaki, Koichi Kobayashi, Yutaka Toyozawa, Eiichi Hanamura, 2012-12-06 An exciton is an electronic excitation wave consisting of an electron hole pair which propagates in a nonmetallic solid Since the pioneering research of Frenkel Wannier and the Pohl group in the 1930s a large number of experimental and theoretical studies have been made Due to these investigations the exciton is now a well established concept and the electronic structure has been clarified in great detail The next subjects for investigation are naturally dynamical processes of excitons such as excitation relaxation annihilation and molecule formation and in fact many interesting phenomena have been disclosed by recent works These excitonic processes have been recognized to be quite important in solid state physics because they involve a number of basic interactions between excitons and other elementary excitations It is the aim of this quasi monograph to describe these excitonic processes from both theoretical and experimental points of view we take a few To discuss and illustrate the excitonic processes in solids important and well investigated insulating crystals as playgrounds for excitons on which they play in a manner characteristic of each material The selection of the materials is made in such a way that they possess some unique properties of excitonic processes and are adequate to cover important interactions in which excitons are involved In each material excitonic processes are described in detail from the experimental side in order to show the whole story of excitons in a particular material Charge Dynamics in Organic Semiconductors Pascal Kordt, 2016-09-12 In the field of

organic semiconductor researchers and manufacturers are faced with a wide range of potential molecules. This work presents concepts for simulation based predictions of material characteristics starting from chemical structures. The focus lies on charge transport be it in microscopic models of amorphous morphologies, lattice models or large scale device models. An extensive introductory review which also includes experimental techniques makes this work interesting for a broad readership. Contents: Organic Semiconductor Devices, Experimental Techniques, Charge Dynamics at Different Scales, Computational Methods, Energetics and Dispersive Transport, Correlated Energetic Landscapes, Microscopic Stochastic and Device Simulations, Parametrization of Lattice Models, Drift Diffusion with Microscopic Link. **Elements of Wave**

**Mechanics**, Maxwell's Enduring Legacy Malcolm Longair, 2016-07-07. An authoritative scientific history of a world leading physics laboratory from its origins in the late nineteenth century to the present day. *A Course in Luminescence Measurements and Analyses for Radiation Dosimetry* Stephen W. S. McKeever, 2022-05-25. A Course in Luminescence Measurements and Analyses for Radiation Dosimetry. A complete approach to the three key techniques in luminescence dosimetry. In *A Course in Luminescence Measurements and Analyses for Radiation Dosimetry*, expert researcher Stephen McKeever delivers a holistic and comprehensive exploration of the three main luminescence techniques used in radiation dosimetry: thermoluminescence, optically stimulated luminescence and radiophotoluminescence. The author demonstrates how the three techniques are related to one another and how they compare to each other. Throughout the author's focus is on pedagogy including state of the art research only where it is relevant to demonstrate a key principle or where it reveals a critical insight into physical mechanisms. The primary purpose of the book is to teach beginning researchers about the three aforementioned techniques, their similarities and distinctions and their applications. *A Course in Luminescence Measurements and Analyses for Radiation Dosimetry* offers access to a companion website that includes original data sets and problems to be solved by the reader. The book also includes a thorough introduction to the field of luminescence applications in radiation dosimetry including a history of the subject. Comprehensive explorations of introductory models and kinetics including the concepts of thermoluminescence, optically stimulated luminescence and radiophotoluminescence. Practical discussions of luminescence curve shapes including the determination of trapping parameters from experimental thermoluminescence and optically stimulated luminescence data. In depth examinations of dose response functions: superlinearity, supralinearity and sublinearity as well as the causes of non linearity. Detailed examples with well known materials. *A Course in Luminescence Measurements and Analyses for Radiation Dosimetry* is an invaluable guide for undergraduate and graduate students in the field of radiation dosimetry as well as faculty and professionals in the field. *Structure and Bonding in Crystals* Michael O'Keeffe, 2012-12-02. *Structure and Bonding in Crystals* presents a new understanding of the older topics such as bond length, bond strength and ionic radii. These concepts have been used by geochemists and geophysicists to systematize and predict phase transitions at high pressure. The final group of chapters deals with the problems of classifying complex solids and with

systematic descriptions of the relationships between their structures This book comprises 13 chapters with the first presenting a historical perspective by Linus Pauling The following chapters then go on to discuss quantum theory and crystal chemistry pseudopotentials and crystal structure quantum defect orbital radii and the structural chemistry of simple solids and a pseudopotential viewpoint of the electronic and structural properties of crystals Other chapters cover elementary quantitative theory of chemical bonding the role and significance of empirical and semiempirical correlations theoretical probes of bonding in the disiloxo group a comparison of experimental and theoretical bond length and angle variations the role of nonbonded forces in crystals molecules within infinite solids charge density distributions and some aspects of the ionic model of crystals This book will be of interest to practitioners in the fields of chemistry physics and geology
