

# Research Topic: How Does Climate Change Impact Agricultural Productivity in Developing Countries?

## Introduction

Climate change is a pressing global issue with far-reaching consequences. One of the most significant impacts is on agriculture, a cornerstone of many developing economies. This research aims to investigate how climate change is affecting agricultural productivity in developing countries, focusing on factors such as temperature variations, precipitation patterns, and the vulnerability of different crops. By understanding these impacts, we can develop strategies to mitigate the negative effects and ensure food security in these regions.

## Literature Review

Existing research highlights the multifaceted effects of climate change on agriculture. Temperature increases can lead to heat stress in crops, reducing yields and affecting crop quality. Changes in precipitation patterns, including more frequent droughts and floods, can disrupt crop growth cycles and increase the risk of soil erosion. Additionally, rising sea levels and ocean acidification pose threats to coastal agriculture and fisheries. Studies have also shown that climate change can exacerbate existing challenges such as poverty, inequality, and limited access to resources in developing countries.

## Methodology

This research will employ a mixed-methods approach, combining quantitative and qualitative data. Quantitative data will be collected through surveys, interviews, and
