*Electrooptical Arrays* Dmitrii I. Voskresenskii, Aleksandr I. Grinev, Evgenii N. Voronin, 2013-06-29 Modern radar telecommunication sonar and radio astronomy systems use integrated systems complex signals and signal processing methods extensively. These systems require the development of new more efficient systems. One of the major ways to improve radar and sonar systems is to use multichannel systems the most promising of which employ space time signal processing. In the last few years the intensive growth in electronics information processing techniques microwave and laser technology electrooptics and holography acoustics and optoelectronics have resulted in new scientific and technological research fronts. One of these is the theory and technology of electrooptical array antennas a new class of receiving antennas whose pattern is controlled by means of coherent optics and holography. Electrooptical array theory and technology have been involved in the study of the power resolution and range characteristics of arrays with various coherent optical processors. The practical applications of these systems and methods for building them using contemporary optoelectronics have also been studied.
