Electrophysiology Of The Central Nervous System:

Electrophysiology of the Central Nervous System V. S. Rusinov, 2012-12-06 The most important yet the most difficult scientific task confronting man is how his brain produces his behavior and his subjective experience The complexity of this problem is ineffably vast exceeding by many orders of magnitude the theoretical and technical achievements concerning atomic energy or the exploration of space Unlike these areas of endeavor neuroscience is fortunate in knowing no national rivalries and its only secrets are those of language The latter however are often highly effective in concealing from workers in Los Angeles the discoveries of their colleagues in Moscow A cogent example is provided in this volume by Roy John p 179 whose experiments proceeded for several years before he discovered the important body of data accumulated earlier by Prof Livanov and his colleagues utilizing the same ingenious technique of the tracer stimulus Reduction of such occurrences is certainly one of the goals of the present book which now becomes a double translation a dozen of the papers having originally been translated into Russian *Electrophysiology of the Central Nervous System* V. Muller, Barry Jacobs, 2009-12-30 Serotonin 5 hydroxytryptamine often cited as 5 HT is one of the major excitatory neurotransmitter and the serotonergic system is one of the best studied and understood transmitter systems It is crucially involved in the organization of virtually all behaviours and in the regulation of emotion and mood Alterations in the serotonergic system induced by e g learning or pathological processes underlie behavioural plasticity and changes in mood which can finally result in abnormal behaviour and psychiatric conditions Not surprisingly the serotonergic system and its functional components appear to be targets for a multitude of pharmacological treatments examples of very successful drugs targeting the serotonergic system include Prozac and Zoloft The last decades of research have not only fundamentally expanded our view on serotonin but also revealed in much more detail an astonishing complexity of this system which comprises a multitude of receptors and signalling pathways A detailed view on its role in basal but also complex behaviours emerged and was presented in a number

of single review articles Although much is known now the serotonergic system is still a fast growing field of research contributing to our present understanding of the brains function during normal and disturbed behaviour This handbook aims towards a detailed and comprehensive overview over the many facets of behavioural serotonin research As such it will provide the most up to date and thorough reading concerning the serotonergic systems control of behaviour and mood in animals and humans The goal is to create a systematic overview and first hand reference that can be used by students and scholars alike in the fields of genetics anatomy pharmacology physiology behavioural neuroscience pathology and psychiatry The chapters in this book will be written by leading scientists in this field Most of them have already written excellent reviews in their field of expertise The book is divided in 4 sections After an historical introduction illustrating the growth of ideas about serotonin function in behaviour of the last forty years section A will focus on the functional anatomy of the serotonergic system Section B provides a review of the neurophysiology of the serotonergic system and its single components In section C the involvement of serotonin in behavioural organization will be discussed in great detail while section D deals with the role of serotonin in behavioural pathologies and psychiatric disorders The first handbook broadly discussing the behavioral neurobiology of the serotonergic transmitter system Co edited by one of the pioneers and opinion leaders of the past decades Barry Jacobs Princeton with an international list 10 countries of highly regarded contributors providing over 50 chapters and including the leaders in the field in number of articles and citations K P Lesch T Sharp A Caspi P Blier G K Aghajanian E C Azmitia and others The only integrated and complete resource on the market containing the best information integrating international research providing a global perspective to an international community Of great value not only for researchers and experts but also for students and clinicians as a background reference
