

ST102 Exercise 15

In this exercise you will practice aspects of asymptotic distributions and interval estimation. Question 1 requires you to obtain the asymptotic sampling distribution of the maximum likelihood estimator of the Bernoulli parameter, π . Question 2 uses the sample standard deviation for determining a confidence interval for the population mean. In Question 3, think about using a two-point (i.e. Bernoulli) distribution. Finally, Question 4 requires you to evaluate whether “ s ” of the sample standard deviation is appropriate to calculate a confidence interval.

Your answers to this problem set should be submitted as a pdf file upload to Moodle. Submission is required during the week of Monday 15 February 2021 as directed by your class teacher. It will be covered by your class teacher in your Bernoulli class, which will take place in the week commencing Monday 22 February 2021.

- 1.* Let $\{X_1, X_2, \dots, X_n\}$ be a random sample from a Bernoulli distribution with parameter π , where $0 < \pi < 1$. By computing Fisher information, determine the asymptotic distribution of the maximum likelihood estimator of π , which is $\hat{\pi} = \bar{X}$.

$$f(x; \pi) = \begin{cases} \pi & \text{for } x = 1 \\ 1 - \pi & \text{for } x = 0 \end{cases}$$

$$f(x; \pi) = \pi^x (1 - \pi)^{1-x}$$

$$\ln(f(x; \pi)) = x \ln \pi + (1 - x) \ln(1 - \pi)$$

$$\frac{d \ln(f(x; \pi))}{d\pi} = \frac{x}{\pi} - \frac{1 - x}{1 - \pi}$$

$$\frac{d^2 \ln(f(x; \pi))}{d\pi^2} = \frac{-x}{\pi^2} - \frac{1 - x}{(1 - \pi)^2}$$

$$\begin{aligned} \text{Option 1: } I(\pi) &= - \sum_x (\pi^x (1 - \pi)^{1-x}) \left(\frac{-x}{\pi^2} - \frac{1 - x}{(1 - \pi)^2} \right) \\ &= \sum_x (\pi^x (1 - \pi)^{1-x}) \left(\frac{x}{\pi^2} + \frac{1 - x}{(1 - \pi)^2} \right) \\ &= \frac{1}{\pi^2} \sum_x x f(x; \pi) + \frac{1}{(1 - \pi)^2} \left(\sum_x f(x; \pi) - \sum_x x f(x; \pi) \right) = \frac{1}{\pi} + \frac{1 - \pi}{(1 - \pi)^2} \\ &= \frac{1}{\pi} + \frac{1}{1 - \pi} = \frac{1 - \pi}{\pi(1 - \pi)} + \frac{\pi}{\pi(1 - \pi)} = \frac{1}{\pi(1 - \pi)} \end{aligned}$$

$$\begin{aligned} \text{Option 2: } I(\pi) &= - \sum_x (\pi^x (1 - \pi)^{1-x}) \left(\frac{-x}{\pi^2} - \frac{1 - x}{(1 - \pi)^2} \right) \\ &= \sum_x (\pi^x (1 - \pi)^{1-x}) \left(\frac{x}{\pi^2} + \frac{1 - x}{(1 - \pi)^2} \right) = E \left(\frac{x}{\pi^2} + \frac{1 - x}{(1 - \pi)^2} \right) \\ &= \frac{\pi}{\pi^2} + \frac{1 - \pi}{(1 - \pi)^2} = \frac{1}{\pi(1 - \pi)} \end{aligned}$$

$\hat{\pi} \sim^a N \left(\pi, \frac{\pi(1 - \pi)}{n} \right)$ is the asymptotic distribution of the MLE of π ($\hat{\pi}$)

A Primer of Multivariate Statistics Richard J. Harris,2001-05-01 Drawing upon more than 30 years of experience in working with statistics Dr Richard J Harris has updated A Primer of Multivariate Statistics to provide a model of balance between how to and why This classic text covers multivariate techniques with a taste of latent variable approaches Throughout the book there is a focus on the importance of describing and testing one s interpretations of the emergent variables that are produced by multivariate analysis This edition retains its conversational writing style while focusing on classical techniques The book gives the reader a feel for why one should consider diving into more detailed treatments of computer modeling and latent variable techniques such as non recursive path analysis confirmatory factor analysis and hierarchical linear modeling Throughout the book there is a focus on the importance of describing and testing one s interpretations of the emergent variables that are produced by multivariate analysis **Statistical Methods for**

completely rewritten chapters It also discusses factorial designs and interactions and combines repeated measures and randomized block designs in one chapter The authors focus more attention on the practicality of N of 1 randomization tests and the availability of user friendly software to perform them In addition they provide an overview of free and commercial computer programs for all of the tests presented in the book Building on the previous editions that have served as standard textbooks for more than twenty five years Randomization Tests Fourth Edition includes a CD ROM of up to date randomization test programs that facilitate application of the tests to experimental data This CD ROM enables students to work out problems that have been added to the chapters and helps professors teach the basics of randomization tests and devise tasks for assignments and examinations *Single-Case Research Design and Analysis (Psychology Revivals)* Thomas R. Understanding Statistics in the Behavioral Sciences Roger Bakeman, Byron F. Robinson, 2005-03-23 Understanding Statistics in the Behavioral Sciences is designed to help readers understand research reports analyze data and familiarize themselves with the conceptual underpinnings of statistical analyses used in behavioral science literature The authors review statistics in a way that is intended to reduce anxiety for students who feel intimidated by statistics Conceptual underpinnings and practical applications are stressed whereas algebraic derivations and complex formulas are reduced New ideas are presented in the context of a few recurring examples which allows readers to focus more on the new statistical concepts than on the details of different studies The authors selection and organization of topics is slightly different from the ordinary introductory textbook It is motivated by the needs of a behavioral science student or someone in clinical practice rather than by formal mathematical properties The book begins with hypothesis testing and then considers how hypothesis testing is used in conjunction with statistical designs and tests to answer research questions In addition this book treats analysis of variance as another application of multiple regression With this integrated unified approach students simultaneously learn about multiple regression and how to analyze data associated with basic analysis of variance and covariance designs Students confront fewer topics but those they do encounter possess considerable more power generality and practical

importance This integrated approach helps to simplify topics that often cause confusion Understanding Statistics in the Behavioral Sciences features Computer based exercises many of which rely on spreadsheets help the reader perform statistical analyses and compare and verify the results using either SPSS or SAS These exercises also provide an opportunity to explore definitional formulas by altering raw data or terms within a formula and immediately see the consequences thus providing a deeper understanding of the basic concepts Key terms and symbols are boxed when first introduced and repeated in a glossary to make them easier to find at review time Numerous tables and graphs including spreadsheet printouts and figures help students visualize the most critical concepts This book is intended as a text for introductory behavioral science statistics It will appeal to instructors who want a relatively brief text The book s active approach to learning works well both in the classroom and for individual self study

Progress in Behavior Modification Michel Hersen,Richard M. Eisler,Peter M. Miller,2013-10-22 Progress in Behavior Modification Volume 16 covers the developments in the study of behavior modification The book discusses pediatric behavioral medicine with focus on directions in treatment and prevention the prevention of teenage pregnancy and the cognitive treatment of phobia The text also describes the behavioral approaches to gerontology behavioral geriatrics behavioral pediatrics and the role of health education in pediatric primary care The advances in behavioral treatment of obesity are also considered Psychologists psychiatrists and pediatricians will find the book invaluable
