Advanced Statistics from an Elementary Point of View Michael J Panik, 2005-10-14 Advanced Statistics from an Elementary Point of View is a highly readable text that communicates the content of a course in mathematical statistics without imposing too much rigor It clearly emphasizes the connection between statistics and probability and helps students concentrate on statistical strategies without being overwhelmed by calculations The book provides comprehensive coverage of descriptive statistics detailed treatment of univariate and bivariate probability distributions and thorough coverage of probability theory with numerous event classifications This book is designed for statistics majors who are already familiar with introductory calculus and statistics and can be used in either a one or two semester course It can also serve as a statistics tutorial or review for working professionals Students who use this book will be well on their way to thinking like a statistician in terms of problem solving and decision making Graduates who pursue careers in statistics will continue to find this book useful due to numerous statistical test procedures both parametric and non parametric and detailed examples Comprehensive coverage of descriptive statistics More detailed treatment of univariate and bivariate probability distributions Thorough coverage of probability theory with numerous event classifications **The Publishers' Trade List Annual** , 1980

Elements of Multivariate Time Series Analysis Gregory C. Reinsel, 2012-12-06 The use of methods of time series analysis in the study of multivariate time series has become of increased interest in recent years Although the methods are rather well developed and understood for univariate time series analysis the situation is not so complete for the multivariate case This book is designed to introduce the basic concepts and methods that are useful in the analysis and modeling of multivariate time series with illustrations of these basic ideas The development includes both traditional topics such as autocovariance and auto correlation matrices of stationary processes properties of vector ARMA models forecasting ARMA

processes least squares and maximum likelihood estimation techniques for vector AR and ARMA models and model checking diagnostics for residuals as well as topics of more recent interest for vector ARMA models such as reduced rank structure structural indices scalar component models canonical correlation analyses for vector time series multivariate unit root models and cointegration structure and state space models and Kalman filtering techniques and applications This book concentrates on the time domain analysis of multivariate time series and the important subject of spectral analysis is not considered here For that topic the reader is referred to the excellent books by Jenkins and Watts 1968 Hannan 1970 Priestley 1981 and others
