A Course in Commutative Algebra Gregor Kemper, 2010-12-02 This textbook offers a thorough modern introduction into commutative algebra. It is intended mainly to serve as a guide for a course of one or two semesters or for self study. The carefully selected subject matter concentrates on the concepts and results at the center of the field. The book maintains a constant view on the natural geometric context enabling the reader to gain a deeper understanding of the material. Although it emphasizes theory, three chapters are devoted to computational aspects. Many illustrative examples and exercises enrich the text.

Actions and Invariants of Algebraic Groups Walter Ricardo Ferrer Santos, Alvaro Rittatore, 2017-09-19 *Actions and Invariants of Algebraic Groups* Second Edition presents a self contained introduction to geometric invariant theory starting from the basic theory of affine algebraic groups and proceeding towards more sophisticated dimensions. Building on the first edition, this book provides an introduction to the theory by equipping the reader with the tools needed to read advanced research in the field. Beginning with commutative algebra, algebraic geometry and the theory of Lie algebras, the book develops the necessary background of affine algebraic groups over an algebraically closed field and then moves toward the algebraic and geometric aspects of modern invariant theory and quotients.

Commutative Algebra Alberto Corso, Philippe Gimenez, Maria Vaz Pinto, Santiago Zarzuela, 2005-08-15 Packed with contributions from international experts, *Commutative Algebra: Geometric, Homological, Combinatorial and Computational Aspects* features new research results that borrow methods from neighboring fields such as combinatorics, homological algebra, polyhedral geometry, symbolic computation and topology. This book consists of articles presented at the conference.

Commutative Algebra Irena Peeva, 2022-02-18 This contributed volume is a follow up to the 2013 volume of the same title published in honor of noted algebraist David Eisenbud's 65th birthday. It brings together the highest quality expository papers written by leaders and talented junior mathematicians in the field of Commutative Algebra. Contributions cover a very wide range of topics including core areas in Commutative Algebra and also relations to Algebraic Geometry, Category Theory, Combinatorics, Computational Algebra, Homological Algebra, Hyperplane Arrangements and Non commutative Algebra. The book aims to showcase the area and aid junior mathematicians and researchers who are new to the field in broadening their background and gaining a deeper understanding of the current research in this area. Exciting developments are surveyed and many open problems are discussed with the aspiration to inspire the readers and foster further research.

Algebraic, Number Theoretic, and Topological Aspects of Ring Theory Jean-Luc Chabert, Marco Fontana, Sophie Frisch, Sarah Glaz, Keith Johnson, 2023-07-07 This volume has been curated from two sources: presentations from the Conference on Rings and Polynomials Technische Universität Graz, Graz, Austria, July 19-24, 2021, and papers intended for presentation at the Fourth International Meeting on Integer-valued Polynomials and Related Topics, CIRM Luminy, France, which was cancelled due to the pandemic. The collection ranges widely over the algebraic, number theoretic and topological aspects of rings, algebras and polynomials. Two areas of

particular note are topological methods in ring theory and integer valued polynomials The book is dedicated to the memory of Paul Jean Cahen a coauthor or research collaborator with some of the conference participants and a friend to many of the others This collection contains a memorial article about Paul Jean Cahen written by his longtime research collaborator and coauthor Jean Luc Chabert

Algebraic Geometry over the Complex Numbers Donu Arapura, 2012-02-15 This is a relatively fast paced graduate level introduction to complex algebraic

geometry from the basics to the frontier of the subject It covers sheaf theory cohomology some Hodge theory as well as some of the more algebraic aspects of algebraic geometry The author frequently refers the reader if the treatment of a certain topic is readily available elsewhere but goes into considerable detail on topics for which his treatment puts a twist or a more transparent viewpoint His cases of exploration and are chosen very carefully and deliberately The textbook achieves its purpose of taking new students of complex algebraic geometry through this a deep yet broad introduction to a vast subject eventually bringing them to the forefront of the topic via a non intimidating style

Algebras, Rings and Modules Michiel Hazewinkel, Nadiya M. Gubareni, 2016-04-05 The theory of algebras rings and modules is one of the fundamental domains of modern mathematics General algebra more specifically non commutative algebra is poised for major advances in the twenty first century together with and in interaction with combinatorics just as topology analysis and probability experienced in the twentieth century

Differential Algebra and Related Topics Li Guo, 2002 Differential algebra explores properties of solutions of systems of ordinary or partial linear or non linear differential equations from an algebraic point of view It includes as special cases algebraic systems as well as differential systems with algebraic constraints This algebraic theory of Joseph F Ritt and Ellis R Kolchin is further enriched by its interactions with algebraic geometry Diophantine geometry differential geometry model theory control theory automatic theorem proving combinatorics and difference equations Differential algebra now plays an important role in computational methods such as symbolic integration and symmetry analysis of differential equations These proceedings consist of tutorial and survey papers presented at the Second International Workshop on Differential Algebra and Related Topics at Rutgers University Newark in April 2007 As a sequel to the proceedings of the First International Workshop this volume covers more related subjects and provides a modern and introductory treatment to many facets of differential algebra including surveys of known results open problems and new emerging directions of research It is therefore an excellent companion and reference text for graduate students and researchers

Actions and Invariants of Algebraic Groups Walter Ferrer Santos, Alvaro Rittatore, 2005-04-26 Actions and Invariants of Algebraic Groups presents a self contained introduction to geometric invariant theory that links the basic theory of affine algebraic groups to Mumford's more sophisticated theory The authors systematically exploit the viewpoint of Hopf algebra theory and the theory of comodules to simplify and compactify many of the results
