

Stripping Transparent Materials

The Purpose of **Stripping**: Mechanical stripping is the process of assembling all pieces of film containing images that will be carried on the same printing plate and securing them on a masking sheet that will hold them in their appropriate printing positions during the platemaking process.

The assembled masking sheet with pieces of film attached is called **flat**.

The flat is generally tested on some inexpensive photosensitive material to check image positions and to ensure that no undesired light reaches the plate. This process is called **proof**.
