[Trade Finance during the Great Trade Collapse](#)

Jean-Pierre Chauffour, 2011-06-22 On September 15, 2008, Lehman Brothers, the fourth largest U.S. investment bank, filed for bankruptcy. Global credit markets tightened. Spreads skyrocketed. International trade plummeted by double digits. Banks were reportedly unable to meet the demand from their customers to finance their international trade operations, leaving a trade finance gap estimated at around US\$25 billion. Governments and international institutions felt compelled to intervene based on the information that some 80-90 percent of world trade relies on some form of trade finance. As the recovery unfolds, the time has come to provide policy makers and analysts with a comprehensive assessment of the role of trade finance in the 2008-09 great trade collapse and the subsequent role of governments and institutions to help restore trade finance markets. After reviewing the underpinning of trade finance and interfirm trade credit, *Trade Finance during the Great Trade Collapse* aims to answer the following questions:

- Was the availability and cost of trade finance a major constraint on trade during the 2008-09 global economic crisis?
- What are the underpinnings and limits of national and international public interventions in support of trade finance markets in times of crisis?
- How effective were the public and private sector mechanisms put in place during the crisis to support trade and trade finance?
- To what extent have the new banking regulations under Basel II and Basel III exacerbated the trade finance shortfall during the crisis and in the post-crisis environment, respectively?

Trade Finance during the Great Trade Collapse is the product of a fruitful collaboration during the crisis among the World Bank Group, international financial partners, private banks, and academia. Trade is the lifeblood of the world economy, and the sharp collapse in trade volumes was one of the most dramatic consequences of the global financial crisis. It was the moment the financial crisis hit the real economy, and when parts of the world far from the epicenter of financial turbulence felt its full fury. This book is extremely timely and full of critical insights into the role of trade finance and the potential damaging impact from the unintended consequences of regulatory changes.

Developing Countries and the Multilateral Trade Regime

Donatella Alessandrini, 2010-08-10 This book explores the way in which

development has functioned within the multilateral trade regime since de colonisation In particular it investigates the shift from early approaches to development under the GATT to current approaches to development under the WTO It argues that a focus on the creation and transformation of a scientific apparatus that links forms of knowledge about the so called Third World with forms of power and intervention is crucial for understanding the six decades long development enterprise of both the GATT and the WTO The book is both topical and necessary given the emphasis on the current round of negotiations of the WTO The Doha Development Round has been premised on two assumptions Firstly that the international community has undertaken an unprecedented effort to address the imbalances of the multilateral trading regime with respect to the position of its developing country members Secondly that its successful conclusion represents an historic imperative and a political necessity for developing countries Through a sustained analysis of the interaction between development thinking and trade practices the book questions both assumptions by showing how development has always occupied a central position within the multilateral trading regime Thus rather than asking the question of what needs to be done in order to achieve development the book examines the way in which development has operated and still operates to produce important and often unacknowledged power relations Intense controversy surrounds the issue of the relationship between trade and development This book is novel in examining the emergence of the international trade regime in the context of the history of the concept of development that may be traced back at least to the time of the League of Nations This is a very welcome and original contribution to the field that should generate new discussions and understanding about the law of international trade
