**Options** Lenos Trigeorgis,1996-03-14 Comprehensive in scope Real Options reviews current techniques of capital budgeting and details an approach based on the pricing of options that provides a means of quantifying the elusive elements of managerial flexibility in the face of unexpected changes in the market In the 1970s and the 1980s developments in the valuation of capital investment opportunities based on options pricing revolutionized capital budgeting Managerial flexibility to adapt and revise future decisions in order to capitalize on favorable future opportunities or to limit losses has proven vital to long term corporate success in an uncertain and changing marketplace In this book Lenos Trigeorgis who has helped shape the field of real options brings together a wealth of previously scattered knowledge and research on the new flexibility in corporate resource allocation and in the evaluation of investment alternatives brought about by the shift from static cash flow approaches to the more dynamic paradigm of real options an approach that incorporates decisions on whether to defer expand contract abandon switch use or otherwise alter a capital investment Comprehensive in scope Real Options reviews

current techniques of capital budgeting and details an approach based on the pricing of options that provides a means of quantifying the elusive elements of managerial flexibility in the face of unexpected changes in the market. Also discussed are the strategic value of new technology, project interdependence and competitive interaction. The ability to value real options has so dramatically altered the way in which corporate resources are allocated that future textbooks on capital budgeting will bear little resemblance to those of even the recent past. Real Options is a pioneer in this area, coupling a coherent picture of how option theory is used with practical insights into real world applications.

Real Options and Corporate Strategy Christian Berner, 2000-03-01 Inhaltsangabe Abstract Every investment for example new facilities new products or strategic partnerships is driven by the pursuit of creating values. Major changes are going on in the valuation of investments. Although the classic shareholder value concept is still a valuable source for identification of value drivers of strategic management it needs to be extended in terms of its ability to evaluate long term investment choices. Far too long capital budgeting has only been considered under aspects of its contribution to an overall added economic value rather than focusing on a firm's resources. Recent research emphasized the strategic value of resources leading to formulate the approach of a resource based view of a firm's activities. Usually management tries to capture future development with static methods of capital budgeting i.e. future cash flows are discounted with a fixed risk adjusted discount rate. However the finding of present values and capitalized values could produce pitfalls in investment decisions. Strategic investment decisions are often characterized by a wide range of possibilities to react flexibly to the changing business environment. This area of tolerance in investment decisions could not be captured with traditional instruments of investment evaluation. In the 1970s the discounted cash flow analysis DCF emerged and proved its practicability. This method assumes a now or never approach in undertaking a project. Some authors suggest adding the theory of option prices to investment decisions as in the 1970s and the 1980s developments in the valuation of capital investment opportunities based on option pricing revolutionized capital budgeting. Option pricing allows adaptation and revision of future decisions in order to capture managerial flexibility and to finally capitalize on any possible future development. To incorporate these real options means to limit losses and offers a vital contribution to long term corporate success especially in those marketplaces characterized by uncertainty and rapid change. This method also explains the value of waiting for the initial project and considers its value in comparison to the opportunity

costs of waiting These costs are dictated by the behavior of competitors and loss of cash flow streams from the project Incorporating this method could possibly lead to a better understanding of the importance of resource allocation the value of strategic investments and

The New Investment Theory of Real Options and its Implication for Telecommunications Economics James J. Alleman, Eli M. Noam, 2007-08-19 Randall B Lowe Piper Marbury L L R The issue of costing and pricing in the telecommunications industry has been hotly debated for the last twenty years Indeed we are still wrestling today over the cost of the local exchange for access by interexchange and competitive local exchange carriers as well as for universal service funding The U S telecommunications world was a simple one before the emergence of competition comprising only AT T and independent local exchange carriers Costs were allocated between intrastate and interstate jurisdictions and then again between intrastate local and toll The Bell System then divided those costs among itself using a process referred to as the division of revenues and independents using a process called settlements Tolls subsidized local calls to keep the politicians happy and the firm as a whole covered its costs and made a fair return State regulators however lacked the wherewithal to audit this process Their concerns centered generally on whether local rates irrespective of costs were at a politically acceptable level Although federal regulators were better able to determine the reasonableness of the process and the resulting costs they adopted an approach of continuous surveillance where like the state regulator the appearance of reasonableness was what mattered With the advent of competition this historical costing predicate had to change The Bell System as well as the independents were suddenly held accountable
