G. Tech, 2018-03-02 This book examines the adverse effects of complexity information asymmetries transaction costs and uncertainty on investors decision making It suggests mitigating those effects using appropriate and matching signals and analyzes a sample of 903 German startups to quantitatively highlight the distinct financing patterns and characteristics of high tech startups It then investigates the reasons for these patterns on the basis of a qualitative study that includes 34 interviews with investors and entrepreneurs in the US and Germany and an international expert panel Lastly it presents a framework that matches complexity factors with appropriate productive signals Entrepreneur's choice between Venture Capitalist and Business Angel for Start-Up Financing Daniel Schmidt, 2014-02-01 The study extends the literature on venture capital by examining whether entrepreneur's choice for an external investor and certain firm characteristics have an impact on venture success or not The focus is set on the differences in value creation by venture capitalists and business angels for ventures of the high and low technology sector The assessment of a data set including 252 Series A financing rounds by venture capitalist firms business angels and collaborative investments of both investors conducted between 2005 and 2012 unveils value enhancing aspects for all three financing solutions Overall start ups initially financed by venture capitalist firms perform best with regard to general venture success whereas start ups collaboratively supported by venture capitalists and business angels have the highest chances to exit successfully through a trade sale It becomes further apparent that ventures located in one of the high technology industries internet pharmaceuticals and high tech ventures that are longer established in the market and ventures whose Series A financing round was executed more recently indicate an enhanced likelihood of success *Financing Start-ups* Robert Brown, Alan S.
