Carey,2012-12-01 Stroke Rehabilitation Insights from Neuroscience and Imaging informs and challenges neurologists rehabilitation therapists imagers and stroke specialists to adopt more restorative and scientific approaches to stroke rehabilitation based on new evidence from neuroscience and neuroimaging literatures The fields of cognitive neuroscience and neuroimaging are advancing rapidly and providing new insights into human behavior and learning Similarly improved knowledge of how the brain processes information after injury and recovers over time is providing new perspectives on what can be achieved through rehabilitation Stroke Rehabilitation explores the potential to shape and maximize neural plastic changes in the brain after stroke from a multimodal perspective Active skill based learning is identified as a central element of a restorative approach to rehabilitation The evidence behind core learning principles as well as specific learning strategies that have been applied to retrain lost functions of movement sensation cognition and language are also discussed Current interventions are evaluated relative to this knowledge base and examples are given of how active learning principles have been successfully applied in specific interventions The benefits and evidence behind enriched environments is reviewed with examples of potential application in stroke rehabilitation The capacity of adjunctive therapies such as transcranial magnetic stimulation to modulate receptivity of the damaged brain to benefit from behavioral interventions is also discussed in the context of this multimodal approach Focusing on new insights from neuroscience and imaging the book explores the potential to tailor interventions to the individual based on viable brain networks This book is intended for clinicians rehabilitation specialists and neurologists who are interested in using these new discoveries to achieve more optimal outcomes Equally as important it is intended for neuroscientists clinical researchers and imaging specialists to help frame important clinical

questions and to better understand the context in which their discoveries may be used

nervous system CNS Considering that neuroplasticity is maintained for the whole human life and can be stimulated through specific learning or exposure to enriched environments we can hypothesize that applying specific treatments can be beneficial for people with CNS injury Because the plateau of neuroplasticity can be observed after about 12 weeks from stroke onset it is vital to capitalize on this high level of brain reorganization by providing well timed and well designed treatments Here we can distinguish a wide range of approaches developed for CNS recovery in acute subacute or chronic stage of injury These approaches comprise priming or augmentation techniques including innovative technologies like end effector robots exoskeletons or virtual reality Many of them have been confirmed as effective but so far in clinical practice we can still experience a lack of specific indications i e which therapy for how long time and for which patient s impairment can be applied

Journal of Rehabilitation Research & Development ,1997 **Rethinking physical and rehabilitation medicine** Jean-Pierre Didier,Emmanuel Bigand,2011-01-27 Re education consists in training people injured either by illness or the vagaries of life to achieve the best functionality now possible for them Strangely the subject is not taught in the normal educational curricula of the relevant professions It thus tends to be developed anew with each patient without recourse to knowledge of what such training or assistance in such training might be New paradigms of re education are in fact possible today thanks to advances in cognitive science and new technologies such as virtual reality and robotics They lead to the re thinking of the procedures of physical medicine as well as of re education The first part looks anew at re education in the context of both international classifications of functionality handicap and health and the concept of normality The second part highlights the function of implicit memory in re education And the last part shows the integration of new cognition technologies in the new paradigms of re education
