Handbook of Laser Technology and Applications Colin

Webb, Julian D.C. Jones, 2020-09-29 The invention of the laser was one of the towering achievements of the twentieth century. At the opening of the twenty first century we are witnessing the burgeoning of the myriad technical innovations to which that invention has led. The Handbook of Laser Technology and Applications is a practical and long lasting reference source for scientists and engineers who work with lasers. The Handbook provides a comprehensive guide to the current status of lasers and laser systems; it is accessible to science or engineering graduates needing no more than standard undergraduate knowledge of optics. Whilst being a self contained reference work, the Handbook provides extensive references to contemporary work and is a basis for studying the professional journal literature on the subject. It covers applications through detailed case studies and is therefore well suited to readers who wish to use it to solve specific problems of their own. The first of the three volumes comprises an introduction to the basic scientific principles of lasers, laser beams and non linear optics. The second volume describes the mechanisms and operating characteristics of specific types of laser including crystalline solid state lasers, semiconductor diode lasers, fibre lasers, gas lasers, chemical lasers, dye lasers and many others as well as detailing the optical and electronic components which tailor the laser's performance and beam delivery systems. The third volume is devoted to case studies of applications in a wide range of subjects including materials processing, optical measurement techniques, medicine, telecommunications, data storage, spectroscopy, earth sciences and astronomy and plasma fusion research. This vast compendium of knowledge on laser science and technology is the work of over 130 international experts, many of whom are recognised as the world leaders in their respective fields. Whether the reader is engaged in the science, technology, industrial or medical applications of lasers or is researching the subject as a manager or investor in technical enterprises, they cannot fail to be informed and enlightened by the wide range of information the Handbook supplies.

Handbook of Laser Technology and Applications Chunlei Guo, Chandra Subhash Singh, 2021-06-23 This comprehensive handbook gives a fully updated guide to lasers and laser technologies including the complete range of their technical applications. This fourth volume covers laser applications in the medical, metrology and communications fields. Key Features: Offers a complete update of the original bestselling work including many brand new chapters. Deepens the introduction to fundamentals from laser design and fabrication to host matrices for solid state lasers, energy level diagrams, hosting materials, dopant energy levels and lasers based on nonlinear effects. Covers new laser types including quantum cascade lasers, silicon based lasers, titanium sapphire lasers, terahertz lasers, bismuth doped fiber lasers and diode pumped alkali lasers. Discusses the latest applications e.g. lasers in microscopy, high speed imaging, attosecond metrology, 3D printing, optical atomic clocks, time resolved spectroscopy, polarization and profile measurements, pulse measurements and laser induced fluorescence detection. Adds new sections on laser materials processing, laser spectroscopy, lasers in imaging, lasers
