Handbook Of Advanced Plasma Processing Techniques:

Handbook of Advanced Plasma Processing Techniques R.J. Shul, 2000-08-28 This volume covers the topic of advanced plasma processing techniques from the fundamental physics of plasmas to diagnostics modeling and applications such as etching and deposition for microelectronics The use of plasmas for patterning on a submicron scale has enabled successive generations of continually smaller transistors lasers micromachines sensors and magnetic read write heads that have formed the basis of our information age This volume is the first to give coverage to this broad area of topics in a detailed fashion especially in the rapidly expanding fields of micro mechanical machines photomask fabrication magnetic data storage and reactor modeling It provides the reader with a broad array of topics authored by the leading experts in the field

Handbook of Advanced Plasma Processing Techniques R.J. Shul, S.J. Pearton, 2011-06-28 Pattern transfer by dry etching and plasma enhanced chemical vapor deposition are two of the cornerstone techniques for modern integrated circuit fabrication The success of these methods has also sparked interest in their application to other techniques such as surface micromachined sensors read write heads for data storage and magnetic random access memory MRAM The extremely complex chemistry and physics of plasmas and their interactions with the exposed surfaces of semiconductors and other materials is often overlooked at the manufacturing stage In this case the process is optimized by an informed trial and error approach which relies heavily on design of experiment techniques and the intuition of the process engineer The need for regular cleaning of plasma reactors to remove built up reaction or precursor gas products adds an extra degree of complexity because the interaction of the reactive species in the plasma with the reactor walls can also have a strong effect on the number of these species available for etching or deposition Since the microelectronics industry depends on having high process yields at each step of the fabrication process it is imperative that a full understanding of plasma etching and deposition techniques be achieved
