Adhesion Aspects in MEMS/NEMS Seong H. Kim, Michael T. Dugger, Kash L. Mittal, 2011-02-18 Phenomena associated with the adhesion interaction of surfaces have been a critical aspect of micro and nanosystem development and performance since the first MicroElectroMechanicalSystems MEMS were fabricated These phenomena are ubiquitous in nature and are present in all systems however MEMS devices are particularly sensitive to their effects owing to their small size and limited actuation force that can be generated Extension of MEMS technology concepts to the nanoscale and development of NanoElectroMechanicalSystems NEMS will result in systems even more strongly influenced by surface forces The book is divided into five parts as follows Part 1 Understanding Through Continuum Theory Part 2 Computer Simulation of Interfaces Part 3 Adhesion and Friction Measurements Part 4 Adhesion in Practical Applications and Part 5 Adhesion Mitigation

Strategies This compilation constitutes the first book on this extremely important topic in the burgeoning field of MEMS NEMS It is obvious from the topics covered in this book that bountiful information is contained here covering understanding of surface forces and adhesion as well as novel ways to mitigate adhesion in MEMS NEMS This book should be of great interest to anyone engaged in the wonderful and fascinating field of MEMS NEMS as it captures the current R D activity

Technical Book Review ,1965 Properties and Applications of Thermoelectric Materials Veljko

Zlatic,Alexander Hewson,2009-06-24 As concerns with the efficient use of energy resources and the minimization of environmental damage have come to the fore there has been a renewed interest in the role that thermoelectric devices could play in generating electricity from waste heat enabling cooling via refrigerators with no moving parts and many other more specialized applications The main problem in realizing this ambition is the rather low efficiency of such devices for general applications This book deals with the proceedings of a workshop addressed that problems by reviewing the latest experimental and theoretical work on suitable materials for device applications and by exploring various strategies that might increase their efficiency The proceedings cover a broad range of approaches from the experimental work of fabricating new compounds through to theoretical work in characterizing and understanding their properties The effects of strong electron correlation disorder the proximity to metal insulator transitions the properties of layered composite materials and the introduction of voids or cages into the structure to reduce the lattice thermal conductivity are all explored as ways of enhancing the efficiency of their use in thermoelectric devices
