Handbook of Humidity Measurement Volume 3: Sensing Materials and Technologies provides valuable information for practicing engineers, measurement experts, laboratory technicians, project managers in industries and national laboratories and university students and professors interested in solutions to humidity measurement tasks. Despite the fact that this book is devoted to the humidity sensors, it can be used as a basis for understanding fundamentals of any gas sensor operation and development.

Industrial Organic Chemicals Harold A. Wittcoff, Bryan G. Reuben, Jeffery S. Plotkin, 2012-12-10. An essential introduction to the organic chemicals industry in the context of globalization, advances in technology and environmental concerns. Providing 95 percent of the 500 billion pounds of organic chemicals produced in the world, the petroleum and natural gas industries are responsible for products that ensure our present quality of life. Products as diverse as gasoline, plastics, detergents, fibers, pesticides, tires, lipstick, shampoo and sunscreens are based on seven raw materials derived from petroleum and natural gas. In an updated and expanded Third Edition, *Industrial Organic Chemicals* examines why each of these chemical building blocks—ethylene, propylene, C4 olefins, butenes and butadiene, benzene, toluene, the xylenes and methane—is preferred over another in the context of an environmental issue or manufacturing process, as well as their individual chemistry, derivatives, method of manufacture, uses and economic significance. The new edition details the seismic shifts in the world's chemistry industry away from the United States, Western Europe and Japan, transforming the Middle East and Asia Pacific region, especially China, into major players. The book also details the impact of globalization on the patterns of worldwide transportation of chemicals, including methods of shipping chemicals. The technological advances in the area of polymerization and catalysis, including catalyst design and single site catalysts. Chemicals for electronics with much new material on conducting polymers, photovoltaic cells and related materials. The discovery of vast reserves of shale gas and shale oil, altering long term predictions of resource depletion in the United States and other countries. Commercial and market aspects of the chemical industry with coverage of emerging new companies such as INEOS, Formosa Plastics, LyondellBasell and SABIC. With expanded coverage on the vital role of green chemistry, renewables, chemicals and fuels on issues of sustainability and climate change, *Industrial Organic Chemicals* offers an unparalleled examination of what is at the heart of this multi-billion dollar industry: how globalization has transformed it and its ever-growing role in preserving the Earth and its resources.

Scientific and Technical Aerospace Reports, 1995 **Ziegler Catalysts** Gerhard Fink, Rolf

Mülhaupt, Hans H. Brintzinger, 2012-12-06 Forty years after Ziegler's discovery of the Aufbau reaction and low pressure ethene polymerization transition metal catalyzed olefin and diolefin polymerization continues to represent one of the most active and exciting areas. Since the 1980s outstanding scientific innovations and process improvements have revolutionized polyolefin technology and greatly simplified polymerization processes. Well defined catalyst systems are now at hand and facilitate the understanding of basic reaction mechanisms and correlations between catalyst structures, polymer microstructures and polymer properties. This book reviews some of the modern approaches in organometallic chemistry, Ziegler-Natta catalysis, polymerization processes, design of novel materials and the modelling in catalyst and process development.
