Handbook of Environmental Economics

Karl-Goran Maler,2005-12-09 Many of the frontiers of environmental economics research are at the interface of large scale and long term environmental change with national and global economic systems This is also where some of the most of challenging environmental policy issues occur Volume 3 of the Handbook of Environmental Economics provides a synthesis of the latest theory on economywide and international environmental issues and a critical review of models for analyzing those issues It begins with chapters on the fundamental relationships that connect environmental resources to economic growth and long run social welfare The following chapters consider how environmental policy differs in a general equilibrium setting from a partial equilibrium setting and in a distorted economy from a perfect economy The volume closes with chapters on environmental issues that cross or transcend national borders such as trade and the environment biodiversity conservation acid rain ozone depletion and global climate change The volume provides a useful reference for not only natural resource and environmental economists but also international economists development economists and macroeconomists

Emissions, Pollutants and Environmental Policy in China Bo Miao,2013-09-02 As the world s biggest polluter the environmental challenges that China faces in controlling its airborne emissions are crucial not only to its own population in terms of tackling the severe domestic air pollution but also to the planet as it faces calls from the international community to accept its responsibilities in cutting greenhouse gases Deteriorating air quality clearly shows that China s current

environmental regime is unsuited to either tackle the rampant domestic air pollution or contribute fairly to international climate action. As such, this book explores the feasibility of applying a national emissions trading system to control multiple air pollutants in China. It begins with an outline of the existing emissions management system and goes on to explore whether a national emissions trading system is a viable choice to combat China's conventional air pollutants. To this end, there is an in-depth analysis of the two pilot sulphur dioxide emissions trading programs in Taiyuan and Jiangsu, as well as an examination of emissions trading schemes in the US and EU. Finally, the book discusses the key design elements of a multi-pollutant cap and trade scheme that addresses both conventional air pollutants and greenhouse gases. This book will be of great interest to students and scholars interested in the fields of environmental studies, Chinese politics, and environmental law. It will also be invaluable to policy makers in the field.

Decision Making for the Environment National Research Council, Division of Behavioral and Social Sciences and Education, Center for Economic, Governance, and International Studies, Committee on the Human Dimensions of Global Change, Panel on Social and Behavioral Science Research Priorities for Environmental Decision Making, 2005-05-31. With the growing number, complexity, and importance of environmental problems, come demands to include a full range of intellectual disciplines and scholarly traditions to help define and eventually manage such problems more effectively. *Decision Making for the Environment* Social and Behavioral Science Research Priorities is the result of a 2-year effort by 12 social and behavioral scientists, scholars, and practitioners. The report sets research priorities for the social and behavioral sciences as they relate to several different kinds of environmental problems.

Humanity's Footprint Walter K. Dodds, 2008-02-06. For the first time in history, humans have exceeded the sustaining capacity of Earth's global ecosystems. Our expanding footprint has tremendous momentum, and the insidious explosion of human impact creates a shockwave that threatens ecosystems worldwide for decades, possibly centuries. Walter K. Dodds depicts in clear, nontechnical terms the root causes and global environmental effects of human behavior. He describes trends in population growth, resource use, and global environmental impacts of the past two centuries, such as greenhouse effects, ozone depletion, water pollution, and species extinctions and introductions. Dodds also addresses less familiar developments, such as the spread of antibiotic-resistant genes in bacteria and the concentration of pesticides in the Arctic and other remote ecosystems. He identifies fundamental human activities that have irreversible effects on the environment and draws on recent social science and game theory results to explain why people use more than their share. Past behavior indicates that as resources grow scarce, humans will escalate their use of what remains instead of managing their consumption. *Humanity's Footprint* paints a lively but ultimately sobering picture of our environmental predicament. Dodds calls for a consistent approach to socioenvironmental restoration that draws on new thinking from across disciplines to develop sustainable solutions to global environmental problems.

China's Way to Carbon Emissions Reduction Ying Shen, 2015-08-18. Now that the most recent scientific estimates have shown that China has become the world's largest source of greenhouse gas emissions, China's influence on

the world's environment and sustainable development highlights the importance of tailoring Chinese climate change law to conform with the requirements of international conventions and agreements on climate change. This thorough analysis based on an examination of climate status, legal background and current regulatory systems in China examines the potential role of different policy instruments in reducing carbon emissions in order to find an appropriate choice for China and recommends approaches to key issues for relevant authorities. The author conducts a comprehensive and in-depth study on the three mainstream environmental policy instruments used to control carbon emissions: the cap and trade system, the carbon tax and command and control regulations in a Chinese context. She reviews China's current policies and elucidates how the issues of climate change and global warming call for social, environmental, economic and legal reforms in China, especially in the areas of administrative law and property rights law. Among the issues and topics covered are the following: key issues on designing and implementing each of the three policy instruments; the choice of regulatory instruments for carbon emissions reduction in a socialist market economy based on the discussion of market failure and government failure theories; legal challenges from China's current administrative legislation and the definition of carbon emissions entitlements; practical effect of China's climate change policy at the national, provincial and local levels; effectiveness of China's implementation of its international obligations; lessons learned from schemes implemented in the United States and Australia; comparison of China's seven regional pilot emissions trading scheme (ETS) programmes with the well-established EU ETS; linkage between China's ETS and other ETSs from a global perspective; and future direction of an emerging carbon market in China. The analysis assesses the critical costs and benefits of each approach in the context of selected case studies, taking legal literature in the field fully into account. Given that the Chinese government is taking steps to reduce emissions by altering energy production and usage and is signalling a willingness to make similar commitments in a multilateral treaty, it is very timely and important for lawmakers and scholars within and outside China to think about new and appropriate regulatory measures to respond to the crisis and plan for a sustainable future. This study provides not only a useful benchmark for both China and other countries in formulating initiatives on enhancing climate protection but also details the global implications for governments and for international organizations concerned with the understanding between China and the rest of the world in the context of climate change mitigation.

Water Quality Policy and Management in Asia Cecilia Tortajada, 2014-10-14. Asia's 48 countries have an estimated 1.757 billion urban population and 2.4 billion people in rural areas or approximately 60 per cent of the global population. Divided into central, eastern, southern, south-eastern and western regions, the continent is also extremely heterogeneous in terms of water quality conditions. The policies and management practices vary significantly from one country to another and even within one country depending on specific economic, political, social, environmental, legal and institutional factors. In order to appreciate the complexities associated with water quality policy and management, it is important to acknowledge the multiplicity of interrelated and often conflicting events, issues, actors and interests both within

and outside the water sector that impact them This complexity alongside institutional inability for systematic and coordinated collaboration are potent reasons as to why in the second decade of the 21st century formulation and implementation of efficient water quality management policies benefitting humankind and the environment have still not been achieved The book was originally published as a special issue of the International Journal of Water Resources Development

Real Option Based Appraisal of Environmental Investments - An Assessment of NO_x Emission Control Techniques in Large Combustion Plants Schiel, Carmen, 2019-06-27

Carbon Markets Around the Globe Rudolph, Sven, Aydos, Elena, 2021-09-09 In this timely book Sven Rudolph and Elena Aydos take an interdisciplinary approach that combines sustainability economics political economy and legal concepts to answer two fundamental questions How can carbon markets be designed to be effective efficient and just at the same time And how can the political barriers to sustainable carbon markets be overcome The authors advance existing theoretical frameworks and examine empirical data from various real life emissions trading schemes identifying strategies and policy windows for implementing truly sustainable ETS

Sustainable Entrepreneurship Christina Weidinger, Franz Fischler, René Schmidpeter, 2013-08-13 Sustainable Entrepreneurship stands for a business driven concept of sustainability which focusses on increasing both social as well as business value so called Shared Value This book shows why and how this unique concept has the potential to become the most recognised strategic management approach in our times It aims to point out the opportunities that arise from putting sustainable entrepreneurship into practice At the same time this book is a wake up call for all those companies and decision makers who underestimated Sustainable Entrepreneurship before or who are simply not aware of its greater dimension Well structured chapters from different academic and business perspectives clearly outline how Sustainable Entrepreneurship contributes to solving the world s most challenging problems such as Climate Change Finance Crisis and Political Uncertainty as well as to ensuring business success The book provides a framework of orientation where the journey might go What can a successful concept of SE look like What are the key drivers for its realisation What is the role of business in shaping the future of our society The book also presents best practices and provides unique learnings as well as business insights from the international Sustainable Entrepreneurship Award www.seaward.org The Sustainable Entrepreneurship Award short SEA is an award for companies today who are thinking about tomorrow by making sustainable business practices an integral part of their corporate culture Companies that receive the SEA are being recognised for the vision they have shown in combining economic and sustainable responsibility

Managing the Transition to a Low-Carbon Economy Bindu N. Lohani, Masahiro Kawai, Venkatachalam Anbumozhi, 2016-03-08 Asia must be at the center of the global fight against climate change It is the world s most populous region with high economic growth a rising share of global greenhouse gas emissions and the most vulnerability to climate risks Its current resource and emission intensive growth pattern is not sustainable This study recognizes low carbon green growth as an imperative not an option for developing Asia Asia has

already started to move toward low carbon green growth Many emerging economies have started to use sustainable development to bring competitiveness to their industries and to serve growing green technology markets The aim of this study is to share the experiences of emerging Asian economies and the lessons learned The book assesses the low carbon and green policies and practices taken by Asian countries identifies gaps and examines new opportunities for low carbon green growth

Urban Water Management for Future Cities Stephan Köster, Moritz Reese, Jian'e Zuo, 2019-01-21 This book features expert contributions on key sustainability aspects of urban water management in Chinese agglomerations Both technical and institutional pathways to sustainable urban water management are developed on the basis of a broad interdisciplinary problem analysis

Handbook of Environmental Economics Karl-Goran Maler, Jeffrey R. Vincent, 2003-06-03 The Handbook of Environmental Economics focuses on the economics of environmental externalities and environmental public goods Volume I examines environmental degradation and policy responses from a microeconomic institutional standpoint Its perspective is dynamic including a consideration of the dynamics of natural systems and global with attention paid to issues in both rich and poor nations In addition to chapters on well established topics such as the theory and practice of pollution regulation it includes chapters on new areas of environmental economics research related to common property management regimes population and poverty mechanism design political economy of regulation experimental evaluations of policy instruments and technological change

Capitalizing on Nature Edward B. Barbier, 2011-09-08 The basic unit of nature the ecosystem is a special form of wealth which we can think of as a stock of natural capital However perhaps because this capital is free we have tended to view it as limitless abundant and always available for our use exploitation and conversion Capitalizing on Nature shows how modeling ecosystems as natural capital can help us to analyze the economic behavior that has led to the overuse of so much ecological wealth It explains how this concept of ecosystem as natural capital sheds light on a number of important issues including landscape conversion ecological restoration ecosystem resilience and collapse spatial benefits and payments for ecosystem services The book concludes by focusing on major policy challenges that need to be overcome in order to avert the worsening problem of ecological scarcity and how we can fund novel financing mechanisms for global conservation

The Story of N Hugh S. Gorman, 2013-01-24 In The Story of N Hugh S. Gorman analyzes the notion of sustainability from a fresh perspective the integration of human activities with the biogeochemical cycling of nitrogen and provides a supportive alternative to studying sustainability through the lens of climate change and the cycling of carbon It is the first book to examine the social processes by which industrial societies learned to bypass a fundamental ecological limit and later began addressing the resulting concerns by establishing limits of their own The book is organized into three parts Part I The Knowledge of Nature explores the emergence of the nitrogen cycle before humans arrived on the scene and the changes that occurred as stationary agricultural societies took root Part II Learning to Bypass an Ecological Limit examines the role of science and market

capitalism in accelerating the pace of innovation eventually allowing humans to bypass the activity of nitrogen fixing bacteria

Part III Learning to Establish Human Defined Limits covers the twentieth century response to the nitrogen related concerns that emerged as more nitrogenous compounds flowed into the environment A concluding chapter The Challenge of Sustainability places the entire story in the context of constructing an ecological economy in which innovations that contribute to sustainable practices are rewarded

Resources, Production and Structural Dynamics Mauro L. Baranzini, Claudia Rotondi, Roberto Scazzieri, 2015-04-30 New approach to the economic theory of resources showing the positive role that scarcities can play in triggering economic growth

Global Climate Change Policy Paul J.J. Welfens, 2022-03-21 This book considers climate change from an economic and international policy perspective It argues that an emissions trading systems ETS should first be adopted in all G20 countries with those national ETS then integrated into a global ETS The topic of global warming is at the forefront of international discussions especially given recent environmental policy changes in the US under Presidents Trump and Biden and the emergence of the Fridays For Future movement Combatting climate change does not necessitate a trade off between economic growth and climate policy provided that the latter is consistently linked to new economic policy Policymakers should support innovation effective redistribution policies and modern mobility concepts Moreover there are crucial links between financial market dynamics and price dynamics in ETS If measures discussed here are coordinated effectively in the EU G20 and at the global level then climate neutrality could be achieved

OECD Studies on Water Mitigating Droughts and Floods in Agriculture Policy Lessons and Approaches OECD, 2016-01-18 Climate change is expected to increase the frequency and magnitude of extreme weather events notably of droughts and floods to which the agriculture sector is particularly exposed
