Railway Congress Association,1900 The Science and Engineering of Materials Donald R. Askeland,Frank Haddleton,Phil Green,Howard Robertson,2013-11-11 The Science and Engineering of Materials Third Edition continues the general theme of the earlier editions in providing an understanding of the relationship between structure processing and properties of

materials This text is intended for use by students of engineering rather than materials at first degree level who have completed prerequisites in chemistry physics and mathematics The author assumes these students will have had little or no exposure to engineering sciences such as statics dynamics and mechanics The material presented here admittedly cannot and should not be covered in a one semester course By selecting the appropriate topics however the instructor can emphasise metals provide a general overview of materials concentrate on mechanical behaviour or focus on physical properties Additionally the text provides the student with a useful reference for accompanying courses in manufacturing design or materials selection In an introductory survey texts such as this complex and comprehensive design problems cannot be realistically introduced because materials design and selection rely on many factors that come later in the student's curriculum To introduce the student to elements of design however more than 100 examples dealing with materials selection and design considerations are included in this edition
