

- *Allergic rhinitis* involves inflammation of nasal mucous membranes in sensitized individuals when inhaled allergenic particles contact mucous membranes and elicit a response mediated by immunoglobulin E (IgE). There are two types: seasonal and persistent (formerly called “perennial”) allergic rhinitis.

PATHOPHYSIOLOGY

- Airborne allergens enter the nose during inhalation and are processed by lymphocytes, which produce antigen-specific IgE, sensitizing genetically predisposed hosts to those agents. On nasal reexposure, IgE bound to mast cells interacts with airborne allergens, triggering release of inflammatory mediators.
- An immediate reaction occurs within seconds to minutes, resulting in rapid release of preformed and newly generated mediators from the arachidonic acid cascade. Mediators of immediate hypersensitivity include histamine, leukotrienes, prostaglandin, tryptase, and kinins. These mediators cause vasodilation, increased vascular permeability, and production of nasal secretions. Histamine produces rhinorrhea, itching, sneezing, and nasal obstruction.
- A late-phase reaction may occur 4 to 8 hours after initial allergen exposure due to cytokine release from mast cells and thymus-derived helper lymphocytes. This inflammatory response causes persistent chronic symptoms, including nasal congestion.

CLINICAL PRESENTATION

- Seasonal (hay fever) allergic rhinitis occurs in response to specific allergens (pollen from trees, grasses, and weeds) present at predictable times of the year (spring and/or fall) and typically causes more acute symptoms.
- Persistent allergic rhinitis occurs year-round in response to nonseasonal allergens (eg, dust mites, animal dander, and molds) and usually causes more subtle, chronic symptoms.
- Many patients have a combination of both types, with symptoms year-round and seasonal exacerbations.
- Symptoms include clear rhinorrhea, sneezing, nasal congestion, postnasal drip, allergic conjunctivitis, and pruritic eyes, ears, or nose.
- In children, physical examination may reveal dark circles under the eyes (allergic shiners), a transverse nasal crease caused by repeated rubbing of the nose, adenoidal breathing, edematous nasal turbinates coated with clear secretions, tearing, and periorbital swelling.
- Patients may complain of loss of smell or taste, with sinusitis or polyps the underlying cause in many cases. Postnasal drip with cough or hoarseness can be bothersome.
- Untreated rhinitis symptoms may lead to insomnia, malaise, fatigue, and poor work or school performance.
- Allergic rhinitis is associated with asthma; 10% to 40% of allergic rhinitis patients have asthma.
- Complications include recurrent and chronic sinusitis and epistaxis.

The book combines comprehensive authoritative information with common sense guidelines, recommendations and coping strategies. **Manual of Allergy and Clinical Immunology for Otolaryngologists** David L. Rosenstreich, Marvin P. Fried, Gabriele S. de Vos, Alexis H.

Jackman, 2015-09-30. Manual of Allergy and Clinical Immunology for Otolaryngologists presents the most up to date knowledge related to allergy and immunology directed towards the unique needs of otolaryngologists. Many of the clinical conditions treated by otolaryngologists have an allergic or immunologic pathogenesis including sinusitis, rhinitis and otitis, and otolaryngologists are often required to use allergic methodology in treating these problems. This book is a resource to which physicians can refer to help them manage allergic aspects of common ENT problems and their diagnosis and management. Manual of Allergy and Clinical Immunology for Otolaryngologists begins with an introduction to the fundamental immunologic processes necessary to understand allergic mechanism and diseases and goes on to include food and drug allergies, anaphylaxis, immune deficiencies, occupational allergic diseases and tumor immunology among other topics. Otolaryngologists across all specialties as well as residents will benefit from the current information that focuses on the most important aspects of each topic in a concise, easy to reference format. **Handbook of Allergic Disorders**, 2003. This comprehensive resource provides clinical guidance for pinpointing the cause and providing a remedy for allergic disorders. Each allergy description includes definition, allergen, causes, signs and symptoms, diagnostic tests, treatments, special considerations, prevention tips and patient teaching aid. Topics covered range from asthma and pollen allergies to environmental, occupational and food and drug allergies. Provides the latest information on traditional and herbal remedies, topicals, antihistamines and OTC medications. **The Manual of Allergy and Clinical Immunology** Abeer Feteih, Michael Fein, Natacha Tardio, 2021-12-27. The Manual of Allergy and Clinical Immunology provides brief clinical summaries of complex and emerging topics encountered in the field of Allergy and Clinical Immunology. As knowledge in the specialty is rapidly evolving, this book condenses this material while maintaining an evidence based approach to the practice. It addresses recent developments in allergy and clinical immunology as there is an increased awareness and interest in these topics due to their impact on a large cohort of the population. It is a quick go to practical and informative guide for students and residents studying for their exams as well as for clinicians in practice. Key Features: Serves as a handy practical reference guide to immunologic and allergic diseases for healthcare professionals in both primary and specialty medicine as well as a study resource for medical students and trainees. Summarizes high yield clinical information in the field to make it easily accessible and user friendly for clinicians and students. Several chapters include a unique section on the management of allergic immunologic disorders in pregnant women. **Manual of Pediatric Allergy** K. Nagaraju, 2020-06-30.
