Handbook Of Cellular Manufacturing Systems:

Handbook of Cellular Manufacturing Systems Shahruckh A. Irani, 1999-04-15 Cellular manufacturing CM is the grouping of similar products for manufacture in discrete multi machine cells It has been proven to yield faster production cycles lower in process inventory levels and enhanced product quality Pioneered on a large scale by Russian British and German manufacturers interest in CM methods has grown steadily over the past decade However there continues to be a dearth of practical guides for industrial engineers and production managers interested in implementing CM techniques in their plants Bringing together contributions by an international team of CM experts the Handbook of Cellular Manufacturing Systems bridges this gap in the engineering literature **CELLULAR MANUFACTURING SYSTEMS** B.S. NAGENDRA

PARASHAR, 2008-10-24 Cellular manufacturing an application of group technology is a stepping stone to achieve world class manufacturing status It has emerged as an important technique to cope up with fast changing industrial demands for the application of newer manufacturing systems This comprehensive and well written text deals with all facets of cellular manufacturing right from introduction to application in a chronological order The book first introduces cell formation techniques followed by elimination of exceptional components evaluation of solutions cell characteristics and production control issues like scheduling line balancing and inventory control Finally it discusses about the application of cellular manufacturing in a large public sector The text is supported by numerous figures tables and examples and also furnishes simple algorithms for complex methods Primarily intended for the postgraduate students of mechanical engineering and production engineering with specialization in manufacturing systems group technology it will also be useful for the researchers scientists and professionals as a reference book Advances in Manufacturing Technology XVII 2003 Y. Cellular Manufacturing Systems N. Singh, D. Rajamani, 2012-12-06 Batch manufacturing is a dominant manufacturing activity in the world generating a great deal of industrial output In the coming years we are going to witness an era of mass customization of products The major problems in batch manufacturing are a high level of product variety and small manufacturing lot sizes The product variations present design engineers with the problem of designing many different parts The decisions made in the design stage significantly affect manufacturing cost quality and delivery lead times The impacts of these product variations in manufacturing are high investment in equipment high tooling costs complex scheduling and loading lengthy setup time and costs excessive scrap and high quality control costs However to compete in a global market it is essential to improve the productivity in small batch manufacturing industries For this purpose some innovative methods are needed to reduce product cost lead time and enhance product quality to help increase market share and profitability What is also needed is a higher level of integration of the design and manufacturing activities in a company Group technology provides such a link between design and manufacturing The adoption of group technology concepts which allow for small batch production to gain economic advantages similar to mass production while retaining the flexibility of job shop methods will help address some of the problems
