Handbook Of Defeasible Reasoning And Uncertainty Management Systems Belief Change:

Intelligent Systems and Soft Computing Behnam Azvine, Nader Azarmi, Detlef D. Nauck, 2006-12-30 Artificial intelligence has traditionally focused on solving human centered problems like natural language processing or common sense reasoning. On the other hand for a while now soft computing has been applied successfully in areas like pattern recognition, clustering or automatic control. The papers in this book explore the possibility of bringing these two areas together. This book is unique in the way it concentrates on building intelligent software systems by combining methods from diverse disciplines such as fuzzy set theory, neuroscience, agent technology, knowledge discovery and symbolic artificial intelligence. The first part of the book focuses on foundational aspects and future directions; the second part provides the reader with an overview of recently developed software tools for building flexible intelligent systems; the final section studies developed applications in various fields.

Belief Revision meets Philosophy of Science Erik J Olsson, Sebastian Enqvist, 2010-10-27 Belief revision theory and philosophy of science both aspire to shed light on the dynamics of knowledge on how our view of the world changes typically in the light of new evidence. Yet these two areas of research have long seemed strangely detached from each other as witnessed by the small number of cross references and researchers working in both domains. One may speculate as to what has brought about this surprising and perhaps unfortunate state of affairs. One factor may be that while belief revision theory has traditionally been pursued in a bottom up manner focusing on the endeavors of single inquirers, philosophers of science inspired by logical empiricism have tended to be more interested in science as a multi agent or agent independent phenomenon.

Symbolic and Quantitative Approaches to Reasoning with Uncertainty Claudio Sossai, Gaetano Chemello, 2009-06-05 This book constitutes the refereed proceedings of the 10th European Conference on Symbolic and Quantitative Approaches to Reasoning with Uncertainty ECSQARU 2009 held in Verona, Italy, July 1-3, 2009. There are 76 revised full papers presented together with 3 invited lectures by three outstanding researchers in the area. All papers were carefully reviewed and selected from 118 submissions for inclusion in the book. The papers are organized in topical sections on algorithms for uncertain inference, argumentation systems, Bayesian networks, belief functions, belief revision and inconsistency handling, classification and clustering, conditioning, independence, inference, default reasoning, foundations of reasoning, decision making under uncertainty, fuzzy sets and fuzzy logic, implementation and application of uncertain systems, logics for reasoning under uncertainty, Markov decision process and mathematical fuzzy logic.

Belief Change Dov M. Gabbay, Philippe Smets, 2012-12-06 Belief change is an emerging field of artificial intelligence and information science dedicated to the dynamics of information and the present book provides a state of the art picture of its formal foundations. It deals with the addition, deletion and combination of pieces of information and more generally with the revision, updating and fusion of knowledge bases. The book offers an extensive coverage of and seeks to reconcile two traditions in the kinematics of belief that often ignore each other: the symbolic and the numerical, often probabilistic approaches. Moreover, the

work encompasses both revision and fusion problems even though these two are also commonly investigated by different communities Finally the book presents the numerical view of belief change beyond the probabilistic framework covering such approaches as possibility theory belief functions and convex gambles The work thus presents a unified view of belief change operators drawing from a widely scattered literature embracing philosophical logic artificial intelligence uncertainty modelling and database systems The material is a clearly organised guide to the literature on the dynamics of epistemic states knowledge bases and uncertain information suitable for scholars and graduate students familiar with applied logic knowledge representation and uncertain reasoning

Logics in Artificial Intelligence Sergio Flesca, Giovambattista Ianni, 2003-08-06 This book constitutes the refereed proceedings of the European Conference on Logics in Artificial Intelligence JELIA 2002 held in Cosenza Italy in September 2002 The 41 revised full papers presented together with 11 system descriptions and 3 invited contributions were carefully reviewed and selected from more than 100 submissions The papers are organized in topical sections on multi agent systems evolution and changes description logic and the semantic web complexity issues probabilistic logic AI planning modal logic and causal reasoning theory reasoning under uncertainty satisfiability paraconsistent reasoning actions and caution logic for agents semantics and optimization issues in answer set semantics

STACS 2000 Horst Reichel, Sophie Tison, 2007-08-03 This book constitutes the refereed proceedings of the 17th Annual Symposium on Theoretical Aspects of Computer Science STACS 2000 held in Lille France in February 2000 The 51 revised full papers presented together with the three invited papers were carefully reviewed and selected from a total of 146 submissions on the basis of some 700 reviewers reports The papers address fundamental issues from all current areas of theoretical computer science including algorithms data structures automata formal languages complexity verification logic cryptography graph theory optimization etc

Rough Set Methods and Applications Lech Polkowski, Shusaku Tsumoto, Tsau Y. Lin, 2000-11-16 Rough set approach to reasoning under uncertainty is based on inducing knowledge representation from data under constraints expressed by discernibility or more generally similarity of objects Knowledge

derived by this approach consists of reducts decision or association rules dependencies templates or classifiers This monograph presents the state of the art of this area The reader will find here a deep theoretical discussion of relevant notions and ideas as well as rich inventory of algorithmic and heuristic tools for knowledge discovery by rough set methods An extensive bibliography will help the reader to get an acquaintance with this rapidly growing area of research

Intellectics and Computational Logic Steffen Hölldobler, 2013-04-18 Intellectics seeks to understand the functions structure and operation of the human intellect and to test artificial systems to see the extent to which they can substitute or complement such functions The word itself was introduced in the early 1980s by Wolfgang Bibel to describe the united fields of artificial intelligence and cognitive science The book collects papers by distinguished researchers colleagues and former students of Bibel s all of whom have worked together with him and who present their work to him here to mark his 60th birthday The papers discuss significant issues in intellectics and computational logic ranging across automated deduction logic programming the logic based approach to intellectics cognitive robotics knowledge representation and reasoning Each paper contains new previously unpublished reviewed results The collection is a state of the art account of the current capabilities and limitations of a computational logic based approach to intellectics Readership Researchers who are convinced that the intelligent behaviour of machines should be based on a rigid formal treatment of knowledge representation and reasoning

A Logical Theory of Nonmonotonic Inference and Belief Change Alexander Bochman, 2001-06-20 This is the first book that integrates nonmonotonic reasoning and belief change into a single framework from an artificial intelligence logic point of view The approach to both these subjects is based on a powerful notion of an epistemic state that subsumes both existing models for nonmonotonic inference and current models for belief change Many results and constructions in the book are completely new and have not appeared earlier in the literature

Degrees of Belief Franz Huber, Christoph Schmidt-Petri, 2008-12-21 This anthology is the first book to give a balanced overview of the competing theories of degrees of belief It also explicitly relates these debates to more traditional concerns of the philosophy of language and mind and epistemic logic

The Language of Fiction Emar Maier, Andreas Stokke, 2021 This volume brings together new research on fiction from the fields of philosophy and linguistics Following a detailed introduction to the field the book s 14 chapters examine long standing issues in fiction research from a perspective that is informed both by philosophy and linguistic theory

Engineering Multi-Agent Systems Natasha Alechina, Matteo Baldoni, Brian Logan, 2022-03-09 This book constitutes revised selected papers from the 9th International Workshop on Engineering Multi Agent Systems EMAS 2021 which was held during May 3 4 2021 The conference was initially planned to take place in London UK but changed to an online event due to the COVID 19 pandemic The 20 full papers and 1 short paper included in this volume were carefully reviewed and selected from a total of 27 submissions The contributions deal with agent oriented software engineering programming multi agent systems declarative agent languages and technologies artificial intelligence

Gabbay, Franz Guenther, 2011-02-01 Belief Revision Refutation and systems in Propositional Logic A Quantifier Scope in Formal Linguistics and Non deterministic Semantics for Logical Systems **Conditionals, Information, and Inference** Gabriele Kern-Isberner, Wilhelm Rödder, Friedhelm Kulmann, 2005-05-13 Conditionals are fascinating and versatile objects of knowledge representation On the one hand they may express rules in a very general sense representing for example plausible relationships physical laws and social norms On the other hand as default rules or general implications they constitute a basic tool for reasoning even in the presence of uncertainty In this sense conditionals are intimately connected both to information and inference Due to their non Boolean nature however conditionals are not easily dealt with They are not simply true or false rather a conditional if A then B provides a context A for B to be plausible or true and must not be confused with A entails B or with the material implication not A or B This illustrates how conditionals represent information understood in its strict sense as reduction of uncertainty To learn that in the context A the proposition B is plausible may reduce uncertainty about B and hence is information The ability to predict such conditioned propositions is knowledge and as such earlier acquired information The first work on conditional objects dates back to Boole in the 19th century and the interest in conditionals was revived in the second half of the 20th century when the emerging Artificial Intelligence made claims for appropriate formal tools to handle generalized rules Since then conditionals have been the topic of countless publications each emphasizing their relevance for knowledge representation plausible reasoning nonmonotonic inference and belief revision
