Springer Handbook of Condensed Matter and Materials Data Werner Martienssen,Hans Warlimont,2006-09-21 Springer Handbook of Condensed Matter and Materials Data provides a concise compilation of data and functional relationships from the fields of solid state physics and materials in this 1200 page volume The data encapsulated in 914 tables and 1025 illustrations have been selected and extracted primarily from the extensive high quality data collection Landolt B rnstein and also from other systematic data sources and recent publications of physical and technical property data Many chapters are authored by Landolt B rnstein editors including the prominent Springer Handbook editors W Martienssen and H Warlimont themselves The Handbook is designed to be useful as a desktop reference for fast and easy retrieval of essential and reliable data in the lab or office References to more extensive data sources are also provided in the book and by interlinking to the relevant sources on the enclosed CD ROM Physicists chemists and engineers engaged in fields of solid state sciences and materials technologies in research development and application will appreciate the ready access to the key information coherently organized within this wide ranging Handbook From the reviews this is the most complete compilation I have ever seen When I received the book I immediately searched for data I never found elsewhere and I found them rapidly No doubt that this book will soon be in every library and on the desk of most solid state scientists and engineers It will never be at rest Physicialia Magazine Book catalog of the Library and Information Services Division Environmental Science Information

Center. Library and Information Services Division,1977 **Elements of Photonics, Volume I** Keigo Iizuka,2002-06-06 Deals with photonics in free space and special media such as anisotropic crystals Covers all important topics from Fourier optics such as the properties of lenses optical image processing and holography to the Gaussian beam light propagation in anisotropic media external field effects polarization of light and its major applications The book is self contained and is suitable as a textbook for a two semester course Provides a particularly good discussion of the electromagnetics of light in bounded media Only book that treats the two complementary topics fiber and integrated optics Careful and thorough presentation of the topics that makes it well suited for courses and self study Includes numerous figures problems and worked out solutions Heavily illustrated with over 400 figures specially formatted to aid in comprehension **CRC**

**handbook of lasers** ,1971 **Book Catalog of the Library and Information Services Division: Shelf list catalog** Environmental Science Information Center. Library and Information Services Division,1977 *Crystalline Lasers* Alexander Kaminskii,2020-09-10 By the end of the 1970s crystalline lasers were widely used in science engineering medicine and technology The types of lasers used have continued to grow in number to include newly discovered crystalline hosts previously known compounds generating at other spectral wavelengths and broadband tunable stimulated emission This has led to the creation of an extremely promising new generation of crystalline lasers that are both highly efficient and more

reliable The major part of this book is devoted to describing multilevel operating laser schemes for stimulated emission excitation in insulating crystals doped with lanthanide ions The first part of Crystalline Lasers deals with the history of the physics and spectroscopy of insulating laser crystals The chapters in the second part of the book present results from the study of Stark energy levels of generating ions in laser crystals and their radiative and nonradiative intermanifold transition characteristics This section includes extensive tabular data and reference information Popular and novel operating schemes of crystalline lasers are covered in Part 3 In the chapters in the fourth part of the book the newest technologies in the physics and engineering of crystalline lasers are considered The results of investigations into laser action under selective excitations miniature crystalline lasers and the properties of nonlinear activated laser crystals are presented and analyzed Crystalline Lasers summarizes and reviews the results of many years of research and studies of activator ions and multilevel operating laser schemes and discusses exciting prospects of using these systems to create new types of crystalline lasers This book will be of use to laser scientists and engineers physicists and chemical engineers

**Optical Performance Evaluation of Infrared Transmitting Materials (LQ-10 High Power Laser Window Program)** Bernard Bendow, Peter D. Gianino, 1972

A nonuniform laser beam traversing a material sample undergoes thermal lensing that is distortion and defocusing due to thermally induced changes in refractive index and bulging of sample faces Vector Kirchhoff diffraction theory is applied to provide a detailed picture of the transmitted beam properties in the presence of lensing In particular the time evolution of the focal properties and the intensity degradation are investigated Four distinct characteristic time regimes are identified for rating solids ultrasmall small transitional and steady state The calculations account for birefringence due to thermally induced stress which is shown to play a major role in the alkali halides The optical performance of transmitting materials in various time regimes is evaluated for Gaussian beams incident on thin circular samples Detailed quantitative ratings are presented for a wide range of transmitting materials at 10.6 micrometers Author Modified Abstract

Handbook of Biological Confocal Microscopy James B. Pawley, 1995 This newly updated second edition details the latest instrumentation and applications of the confocal microscope This edition features 21 new chapters and includes information on preparing living specimens for the confocal microscope

Lasers and Excited States of Rare Earths Renata Reisfeld, Christian K. Jorgensen, 2012-12-06 The possibility of stimulated light emission was discussed by Einstein in 1917 eight years before the quantum mechanical description of energy levels of many electron systems Though it is imperative to use samples having optical properties greatly different from the standard continuous spectrum of opaque objects black body radiation it is not always necessary to restrict the study to monatomic entities Thus spectral lines can be obtained in absorption and in emission from lanthanide compounds containing from one to thirteen 4f electrons going from trivalent cerium to ytterbium that are nearly as sharp as the ones from gaseous atoms However the presence of adjacent atoms modifies the simple picture of an isolated electron configuration and in particular it is possible to pump excited levels efficiently by energy transfer from

species with intense absorption bands such as the inter shell transitions of other lanthanides and of thallium I lead II and bismuth III or the electron transfer bands of the uranyl ion or other complexes On the other hand it is possible to diminish the multi phonon relaxation competing with sharp line luminescence by selecting vitreous or crystalline materials with low phonon energies Obviously one cannot circumvent the conservation of energy by lasers but they may have unprecedented consequences for the future by allowing nuclear fusion of light elements effects of non linear optics and time resolved spectroscopy besides the more conventional applications of coherent light beams with negligible angular extension **U.S. Environmental Protection Agency Library System Book Catalog Holdings as of July 1973** United States.

Environmental Protection Agency. Library Systems Branch,1974 [□□□□□□□□](#) ,1974 [Laser Induced Damage in Optical Materials](#) ,1994 **Topics in Fluorescence Spectroscopy** Joseph R. Lakowicz,2006-04-18 Time resolved fluorescence spectroscopy is widely used as a research tool in biochemistry and biophysics These uses of fluorescence have resulted in extensive knowledge of the structure and dynamics of biological macromolecules This information has been gained by studies of phenomena that affect the excited state such as the local environment quenching processes and energy transfer Topics in Fluorescence Spectroscopy Volume 4 Probe Design and Chemical Sensing reflects a new trend which is the use of time resolved fluorescence in analytical and clinical chemistry These emerging applications of time resolved fluorescence are the result of continued advances in laser detector and computer technology For instance photomultiplier tubes PMT were previously bulky devices Miniature PMTs are now available and the performance of simpler detectors is continually improving There is also considerable effort to develop fluorophores that can be excited with the red near infrared NIR output of laser diodes Using such probes one can readily imagine small time resolved fluorometers even hand held devices being used for doctor's office or home health care
