Operations in Environmental Engineering Robert Noyes, 1994-12-31 This book discusses the practical aspects of environmental technology organized into eight chapters relating to unit operations as follows 1 Biological Technology2 Chemical Technology3 Containment and Barrier Technology4 Immobilization Technology5 Membrane Technology6 Physical Technology7 Radiation and Electrical Technology8 Thermal Destruction TechnologyTraditional technologies have been included as well as those that can be considered innovative and emerging The traditional approaches have been the most successful as contractors are careful about bidding on some of the newer technologies However as regulatory requirements increase markets will open for the innovative and emerging processes There will be increasing pressure to break down complex waste streams with each subsequent stream demanding separate treatment In addition a number of technologies have been developed by combining processes directly or in a treatment train and these developments are expected to assume increasing importance However such concerns as uncertainties due to liability regulatory approval price competition and client approval have limited the application of some of these newer technologies Storm Water Management and

Robert Noyes, 1995-12-31 One of the largest most complicated and expensive environmental problems in the United States is the cleanup of nuclear wastes The US Department of Energy DOE has approximately 4 000 contaminated sites covering tens of thousands of acres and replete with contaminated hazardous or radioactive waste soil or structures In addition to high level waste it has more than 250 000 cubic meters of transuranic waste and millions of cubic meters of low level radio active waste In addition DOE is responsible for thousands of facilities awaiting decontamination decommissioning and dismantling DOE and its predecessors have been involved in the management of radioactive wastes since 1943 when such wastes were first generated in significant quantities as by products of nuclear weapons production Waste connected with DOE s nuclear weapons complex has been accumulating as a result of various operations spanning over five decades The cost estimates for nuclear waste cleanup in the United States have been rapidly rising It has recently been estimated to be in a range from 200 to 350 billion Costs could vary considerably based on future philosophies as to whether to isolate certain sites the iron fence philosophy or clean them up to a pristine condition the greenfields philosophy Funding will also be based on Congressional action that may reduce environmental cleanup based on budget considerations *Chemical Weapons Destruction and Explosive Waste* Robert Noyes, 1996-12-31 Some of the more difficult environmental problems facing the Department of Defense DOD include 1 chemical weapons destruction 2 explosive waste remediation and 3 unexploded ordnance clearance and extraction It is conceivable that 50 to 100 billion will be spent by DOD for these three programs offering unusual opportunities for environmental engineering and related firms Military installations are similar to small cities in terms of population industrial activities and some types of contaminated sites However some cover an area larger than a small state DOD has operated industrial facilities on its installations for several decades that have generated stored recycled or disposed of hazardous wastes Many of these activities have contaminated the nearby soil and groundwater To study and clean up contaminated sites DOD established the Installation Restoration Program IRP in 1975 In 1984 the IRP was made part of the Defense Environmental Restoration Program The Secretary of Defense delegated cleanup responsibility to the Army Navy the Air Force and the Defense Logistics Agency DLA Cleanup actions are usually accomplished under contract with private firms which are monitored by the services Most cleanup actions are funded through the Defense Environmental Restoration Account DERA and the Base Realignment and Closure Account Congress established DERA in 1984 to fund the cleanup of inactive contaminated sites on DOD installations The technology to clean up the conventional hazardous wastes on DOD sites

are the same as those utilized for industrial sites and well documented by this publisher However there are three DOD programs that require the utilization of somewhat unusual or different technologies that have not been as well documented These three programs are 1 Chemical weapons destruction 2 Remediation of explosives contaminated soils and lagoons 3 Unexploded ordnance detection clearance and extraction This book discusses the current and potential treatment technologies involved in these three programs
