Smolinski, Mariofanna G. Milanova, Aboul-Ella Hassanien, 2008-05-27 Computational Intelligence CI has been a tremendously active area of search for the past decade or so There are many successful applications of CI in many sub elds of biology including bioinformatics computational nomics protein structure prediction or neuronal systems modeling and an ysis However there still are many open problems in biology that are in d perate need of advanced and e cient computational methodologies to deal with tremendous amounts of data that those problems are plagued by fortunately biology researchers are very often unaware of the abundance of computational techniques that they could put to use to help them analyze and understand the data underlying their research inquiries On the other hand computational intelligence practitioners are often unfamiliar with the part ular problems that their new state of the art algorithms could be successfully applied for The separation between the two worlds is partially caused by the use of di erent languages in these two spheres of science but also by the relatively small number of publications devoted solely to the purpose of fac itating the exchange of new computational algorithms and methodologies on one hand and the needs of the biology realm on the other The purpose of this book is to provide a medium for such an exchange of expertise and concerns In order to achieve the goal we have solicited cont butions from both computational intelligence as well as biology researchers Computational Models of Argument Chris Reed, Matthias Thimm, Tjitze Rienstra, 2024-09-15 This book presents the proceedings of COMMA 2024 the 10th biennial International Conference on Computational Models of Argument held from 18 to 20 September 2024 in Hagen Germany The COMMA conference series provides a dedicated forum for the presentation and discussion of the latest advancements in this interdisciplinary field covering basic research systems and innovative applications and nurturing the steady growth of interest in computational argumentation research worldwide A total of 63 submissions was received for the conference and after a thorough review process 26 were accepted as full papers with a further 12 accepted as demos accompanied by an extended abstract and 2 as full papers with accompanying demo resulting in an acceptance rate of 53% for full papers and 63% for papers and demo abstracts combined In addition to these 40 papers extended abstracts of the 3 invited talks are also included here Semantics in Argumentation Classifications and Challenges by Leila Amgoud Expanding
