Handbook Of Avian Body Masses:

CRC Handbook of Avian Body Masses John B. Dunning, Jr., 1992-10-05 Body mass or weight is the most useful descriptive measure of relative body size in birds Masses are usually reported in avian studies of comparative ecology physiology breeding biology and zoology In addition adult body mass is a vital statistic for studies of allometric relationships growth and development flight and biometrics The data in this handbook was compiled to provide a ready reference source for body masses of most of the world's species of birds Masses of over 5 800 species are presented representing about 65% of the known birds Information for each species includes when available the mean standard deviation range sample size collecting locale and season and original source Separate means are presented for males and females in sexually dimorphic species This handbook should greatly improve the ability of avian researchers to quickly locate body masses for most bird species and incorporate this data into research Airplane design engineers and airport management professionals can also use these data to calculate the damage done by various species of birds when they hit aircraft Avid birders members of birding organizations and bird banders will also find the book useful for their activities

CRC Handbook of Avian Body Masses John B. Dunning Jr., 2007-12-05 See what's new in the Second Edition Number of species included is increased from 6300 to over 8700 about 85% of the world's birds Better data for many of the species included in the first edition an exhaustive compilation of new data published

Partnerships in Birds : The Study of Monogamy Jeffrey M. Black, 1996-05-30 Some birds mate for life while others have many partners Why In this book fourteen classic studies of bird behaviour are brought together to compare the different partnership patterns from ecological and evolutionary perspectives Often there is a battle of the sexes as individual birds behave in the way that serves their best interests Introductory and concluding chapters review the latest

thinking on this fascinating subject Some birds mate for life while others have many partners In this book fourteen studies are brought together to compare different partnership patterns from ecological and evolutionary perspectives The subjects have been chosen to include the same species living in different habitats Sparrowhawks and at different population densities Great Tits There are comparisons between closely related species Mute Swans and Bewick s Swans The studies span the globe and the behavioural gradient from Iceland s strictly monogamous Whooper Swans to Australia s sexually promiscuous Splendid Fairy wrens In all cases sexual and social relationships strongly influence a bird s survival and breeding success

Modelling the Flying Bird C.J. Pennycuik, 2008-08-23 This book outlines the principles of flight of birds in particular It describes a way of simplifying the mechanics of flight into a practical computer program which will predict in some detail what any bird real or hypothetical can and cannot do The Flight program presented on the companion website generates performance curves for flapping and gliding flight and simulations of long distance migration and accounts successfully for the consumption of muscles and other tissues during migratory flights The program is effectively a working model of a flying bird or bat or pterosaur and is the skeleton around which the book is built The book provides a wider background and then explains how Flight works and shows how to set up and test hypotheses generated by the program The book and the program are based on adapting the conventional and well tested thinking of aeronautical engineers to the biological problems of bird flight Their primary aim is to convince biologists that this is the appropriate way to handle problems that involve flight to make the engineering background accessible to biologists and to provide a tool kit in the shape of the Flight program which they can use to solve practical problems involving bird flight and migration In addition the book will be readily accessible to engineers who want to know how birds work and should be of interest to the ever growing community working on flapping micro air vehicles MAVs The program can be used to predict the flight performance and capabilities of reconstructed fossil birds and pterosaurs flying in ancient atmospheres that differ from present conditions and also of course to predict and account for the results of experiments and observations on living birds and bats An up to date work by the world s leading expert on bird flight Examines the biology and biomechanics of bird flight with added reference to the flight of bats and pterosaurs Uses proven aeronautical principles to help solve biological issues in understanding and predicting the flight capabilities of birds and other vertebrates Provides insights into the evolution of flight and the likely capabilities of extinct birds and reptiles Gives a detailed explanation of the science behind and use of the author s predictive bird flight simulation program Flight which is available on a companion website Presents often difficult concepts in easily understood language

Aeroecology Phillip B. Chilson, Winifred F. Frick, Jeffrey F. Kelly, Felix Liechti, 2018-03-23 This book consists of a diverse collection of chapters that seeks to broaden our fundamental understanding of the ecological function and biological importance of the Earth s lower atmosphere which provides a huge living space for billions of animals moving within and across continents Their migration dispersal and foraging activities connect water and land habitats within and across

continents Drawing upon the wide ranging experience of the authors the book takes an inherently interdisciplinary approach that serves to introduce the reader to the topic of aeroecology frame some of the basic biological questions that can be addressed within the context of aeroecology and highlight several existing and emerging technologies that are being used to promote aeroecological studies The book begins with several background chapters that provide introduction into such topics as atmospheric science the concept of the habitat animal physiology and methods of navigation It then continues with a broad discussion of observational methods available to and used by aeroecologists Finally several targeted examples of aeroecological studies are presented Following the development of the chapters the reader is provided with a unifying framework for investigating how the dynamic properties of meteorological conditions at local regional and global scales affect the organisms that depend on the air for foraging and movement Material presented in the book should be of interest to anyone wishing to gain a comprehensive understanding of the aerosphere itself and the myriad airborne organisms that inhabit and depend upon this environment for their existence The material should be accessible to a diverse set of readers at all stages of training and across a range of research expertise

Wildlife Ecology and Management in Mexico Raul Valdez, José Alfonso Ortega-Santos, 2019-01-23 Mexico is the fourteenth largest country in the world and ranks fifth in biodiversity Located in the transition zone between the temperate and tropical regions of North and South America Mexico is an important migratory corridor for wildlife and also provides wintering habitat for several species of bats monarch butterflies and temperate North American nesting birds Mexico faces several challenges to wildlife management and conservation efforts While there is increased public education and acknowledgment of the valuable benefits wildlife provides there is still much work to do to incentivize conservation efforts Fortunately there is growing recognition that Mexico's wildlife resources can be a critical component in the rural economic

development of the country Bringing together an international team of wildlife experts across North America Wildlife Ecology and Management in Mexico provides information on the status distribution ecological relationships and habitat requirements and management of the most important game birds and mammals in Mexico It also reviews current threats and challenges facing wildlife conservation as well as strategies for resolving these issues This reference is a valuable tool for wildlife biologists wildlife management professionals and anyone interested in conserving Mexico's wealth of natural resources By laying out the challenges to conservation research editors Raul Valdez and J Alfonso Ortega S hope to encourage interdisciplinary communication and collaboration across borders

Ecology of Predation and Scavenging and the Interface Marcos Moleón, 2021-07-01 Predation and scavenging are pervasive ecological interactions in both terrestrial and aquatic environments The ecology evolution and conservation of predators and scavengers have received wide scientific attention and public awareness However the close connection that exists between predation and scavenging has not been emphasized until very recently The recognition that carnivorous animals may obtain meat by either hunting prey or scavenging their carcasses has profound implications from individual behavior to population community and ecosystem levels However many relevant questions still remain unexplored This book deals with some of these questions with the final aim to definitively dismiss the traditional view that predation and scavenging are disconnected ecological processes This compendium of science may help to inspire ecologists evolutionary biologists paleontologists anthropologists epidemiologists forensic scientists anatomists and of course conservation biologists in their stimulating and promising endeavor of achieving a more comprehensive understanding of carnivory in a rapidly changing world

Carbofuran and Wildlife Poisoning Ngaio Richards, 2011-11-11 This cutting edge title is one of the first devoted entirely to the issue of carbofuran and wildlife mortality It features a compilation of international contributions from policy makers researchers conservationists and forensic practitioners and provides a summary of the history and mode of action of carbofuran and its current global use It covers wildlife mortality stemming from legal and illegal uses to this point outlines wildlife rehabilitation forensic and conservation approaches and discuss global trends in responding to the wildlife mortality The subject of carbofuran is very timely because of recent parallel discussions to withdraw and reinstate the insecticide in different parts of the world Incidences of intentional and unintentional wildlife poisonings using carbofuran are undeniably on the rise especially in Africa and India and gatherings of stakeholders are being organized and convened on a global basis There is still a need to consolidate information on the different experiences and approaches taken by stakeholders Carbofuran and Wildlife Poisoning is a comprehensive overview of global wildlife mortality forensic developments and monitoring techniques and is a definitive reference on the subject It comprises of historical and current perspectives contributions from key stakeholders in the issue of global wildlife poisonings with carbofuran people on the ground who deal with the immediate and long term ramifications to wildlife those who have proposed or are working towards mitigative measures and solutions those in contact

with intentional or unintentional offenders those who have adapted and developed forensic methodology and are gathering evidence Carbofuran and Wildlife Poisoning is a collection of meticulously researched papers from all around the world that provide shocking facts about the effects of a deadly insecticide on wildlife The book discusses the hundreds of thousands of animals from elephants to fish that are poisoned each year the efforts to rehabilitate those which have been rescued and the often heroic efforts to ban or reduce the use of the deadly chemical This book is a must for all those concerned with the problem Jane Goodall PhD DBE Founder the Jane Goodall Institute UN Messenger of Peace October 2011 **Serengeti IV**

Anthony R. E. Sinclair, Kristine L. Metzger, Simon A. R. Mduma, John M. Fryxell, 2015-05-11 The vast savannas and great migrations of the Serengeti conjure impressions of a harmonious and balanced ecosystem But in reality the history of the Serengeti is rife with battles between human and non human nature In the 1890s and several times since the cattle virus rinderpest at last vanquished in 2008 devastated both domesticated and wild ungulate populations as well as the lives of humans and other animals who depended on them In the 1920s tourists armed with the world s most expensive hunting gear filled the grasslands And in recent years violence in Tanzania has threatened one of the most successful long term ecological research centers in history Serengeti IV the latest installment in a long standing series on the region s ecology and biodiversity explores the role of our species as a source of both discord and balance in Serengeti ecosystem dynamics Through chapters charting the complexities of infectious disease transmission across populations agricultural expansion and the many challenges of managing this ecosystem today this book shows how the people and landscapes surrounding crucial protected areas like Serengeti National Park can and must contribute to Serengeti conservation In order to succeed conservation efforts must also focus on the welfare of indigenous peoples allowing them both to sustain their agricultural practices and to benefit from the natural resources provided by protected areas an undertaking that will require the strengthening of government and education systems and as such will present one of the greatest conservation challenges of the next century *The Lost World of the Moa* T. H. Worthy, Richard N. Holdaway, 2002 An investigation of the rich and unusual fauna of prehistoric New Zealand telling of one of the most dramatic extinctions of modern times The moa a giant flightless bird was among the animals lost the authors summarize what is known about the bird reconstructing its life and ecology *Biodiversity Monitoring and Conservation* Ben Collen, Nathalie Pettorelli, Jonathan E. M. Baillie, Sarah M. Durant, 2013-02-14 As the impacts of anthropogenic activities increase in both magnitude and extent biodiversity is coming under increasing pressure Scientists and policy makers are frequently hampered by a lack of information on biological systems particularly information relating to long term trends Such information is crucial to developing an understanding as to how biodiversity may respond to global environmental change Knowledge gaps make it very difficult to develop effective policies and legislation to reduce and reverse biodiversity loss This book explores the gap between global commitments to biodiversity conservation and local action to track biodiversity change and implement conservation action High profile

international political commitments to improve biodiversity conservation such as the targets set by the Convention on Biological Diversity require innovative and rapid responses from both science and policy This multi disciplinary perspective highlights barriers to conservation and offers novel solutions to evaluating trends in biodiversity at multiple scales

Neotropical Owls Paula L. Enriquez, 2017-07-24 This book presents a comprehensive biological and ecological information about owls in the neotropic area In addition the book covers topics such as threats and conservation strategies for these nocturnal birds of prey from 18 Neotropical countries Owls are a good example of diversification processes and have developed evolutionary characteristics themselves These species are found almost everywhere in the world but most of them are distributed in tropical areas and about a third of them live in the Neotropics This biogeographic region has a high biodiversity and even share lineages of species from other continents because at some point all were part of Pangea Although we still have much to know and understand about this diverse scarcely studied and threatened group this work aims to be a precedent for future and further research on the subject

2nd Interface Between Ecology and Land Development in California Jon E. Keeley, Melanie Baer-Keeley, C. J. Fotheringham, 2000

Discontinuities in Ecosystems and Other Complex Systems Craig R. Allen, 2008 Following the publication of C S Holling's seminal work on the relationship between animal body mass patterns and scale specific landscape structure ecologists began to explore the theoretical and applied consequences of discontinuities in ecosystems and other complex systems Are ecosystems and their components continuously distributed and do they adhere to scaling laws or are they discontinuous and more complex than early models would have us believe The resulting propositions over the

structure of complex systems sparked an ongoing debate regarding the mechanisms generating discontinuities and the statistical methods used for their detection This volume takes the view that ecosystems and other complex systems are inherently discontinuous and that such fields as ecology economics and urban studies greatly benefit from this paradigm shift Contributors present evidence of the ubiquity of discontinuous distributions in ecological and social systems and how their analysis provides insight into complex phenomena The book is divided into three sections The first focuses on background material and contrasting views concerning the discontinuous organization of complex systems The second discusses discontinuous patterns detected in a number of different systems and methods for detecting them and the third touches on the potential significance of discontinuities in complex systems Science is still dominated by a focus on power laws but the contributors to this volume are convinced power laws often mask the interesting dynamics of systems and that those dynamics are best revealed by investigating deviations from assumed power law distributions In 2008 a grand conference on resilience was held in Stockholm hosting 600 participants from around the world There are now three big centers established with resilience the most recent one being the Stockholm Resilience Center with others in Australia an international coral reef center Arizona State University s new sustainability center focusing on anthropology and Canada s emerging social sciences and resilience center Activity continues to flourish in Alaska South Africa and the United Kingdom and a new center is forming in Uruguay
