Restoring and Protecting Marine Habitat Division on Engineering and Physical Sciences, Commission on Engineering and Technical Systems, Marine Board, 1994-02-01 Tremendous changes have occurred this century in the nation's coastal habitats in the way society views them and in the way they are managed This volume offers a complete highly readable assessment of how scientific knowledge and coastal engineering capabilities can be more effectively used to protect and restore marine habitat It addresses traditional and innovative uses of technology to protect remaining natural marine habitats to enhance or restore those that have been altered and to create marine habitat from lands used for other purposes The use of dredged materials as a vital resource in protection and restoration work is explored The book also explores organizational management and regulatory barriers to using the best available technology and engineering practice Specific options for improvements are offered in each area

Thirsty Planet Constance Elizabeth Hunt, 2013-07-18 By the year 2025 nearly 2 billion people will live in regions experiencing absolute water scarcity In the face of this emerging crisis how should the planet's water be used

and managed Current international policy sees nature competing with human uses of water Hunt takes issue with this perspective She suggests that nature is the source of water and only by making the conservation of nature an absolute priority will we have the water we need for human use in future It is essential therefore to manage water in ways that maintain the water cycle and the ecosystems that support it This book looks at the complexity of the problem It provides a wide array of ideas information case studies and ecological knowledge often from remote corners of the developing world that could provide an alternative vision for water use and management at this critical time Essential and compelling reading for students on courses related to water resource management and development water managers and decision makers and non specialists with an interest in global water issues River Basins and Coastal Systems Planning Within the U.S. Army Corps of Engineers National Research Council, Division on Earth and Life Studies, Water Science and Technology Board, Ocean Studies Board, Committee to Assess the U.S. Army Corps of Engineers Methods of Analysis and Peer Review for Water Resources Project Planning, Panel on River Basin and Coastal Systems Planning, 2004-08-18 The U S Army Corps of Engineers the Corps has played a large and important role in shaping water resources systems in the United States since Congress first tasked it in 1824 to improve navigation on the Ohio and Mississippi Rivers Since then rivers have been modified for navigation and flood control harbors have been dredged for shipping and coastlines are routinely fortified against erosion and beach loss Recent decades have seen an overall decline in budgets for civil works project construction yet the range of objectives for water resources projects has broadened as society places more value on environmental and recreational benefits Thus the Corps portfolio of water resources projects has changed considerably There is a reduced emphasis on traditional construction projects and an increased focus on maintenance and reoperation of existing projects such as locks dams and levees and on environmental restoration projects An integrated approach to water resources planning at the scale of river basins and coastal systems is widely endorsed by the academic and engineering communities The Corps mission expertise and experience give it immense potential to alter the structure and functioning of the nation s waterways and coasts As might be expected in a large and complex organization answering to a range of public and private demands implementation of these new policies and objectives is neither consistent nor complete River Basins and Coastal Systems Planning within the U S Army Corps of Engineers recommends improvements in the Corps water resource project planning and review process This report compares economic and environmental benefits and costs over a range of time and space scales suggests multiple purpose formulation and evaluation methods and recommends integration of water development plans with other projects in the region **Engineering & Contracting** ,1920
