The Evolution of American Educational Technology Paul

Saettler, 2004-03-01 The primary purpose of this book is to trace the theoretical methodological foundations of American educational technology It must be emphasized that this work is essentially as history of the process of educational technology rather than of products in the form of devices or media Although media have played an important role in educational technology the reader should not lose sight of the central process which characterizes and underlies the true historical meaning and function of educational technology Moreover the assumption is made that all current theory methodology and practice rests upon the heritage of the past Indeed a common problem in the field has been the failure in many instances to take adequate account of past history in planning for the present or the future A related purpose of this book is to provide a selective survey of research in educational technology as it relates to the American public schools Such research reviews are not intended to be comprehensive but were included because of their historical importance and their relevance in

Rethinking University Teaching Diana Laurillard,1993 Teachers in higher education are slowly accepting the fact that they have to become more professional in their approach to teaching matching their professionalism in research The notions of quality audit and teacher appraisal are new and in their existing forms ill founded but they represent a challenge that teachers will have to face The book aims to prepare them for this both to contribute towards a well founded implementation of quality audits and appraisal and to achieve their personal aims of improving their teaching and their students learning There is also a growing recognition that the technological media have the potential to improve student learning or at least teach efficiency and university teachers are looking for ways of increasing their understanding of what can be done with the new media and how to do it This book will inform them about what has been done and what is already known helping them to think constructively and critically and building toward a practical methodology for the design development and implementation of educational technologies Part one explores students learning and what it is that they need from educational technology part two looks at individual teaching methods and media including non interactive media lectures print audio etc hypermedia CD ROM etc and interactive media simulations modelling programs etc and part three discussed the design methodology designing learning activities setting up the learning context and maintaining quality Diana Laurillard is Professor of Educational Technology and Pro Vice Chancellor for Learning Technology and Teaching at The Open University She was a member of the National Committee for the Inquiry into Higher Education chaired by Sir Ron Dearing
