Susan P. Sherkow, Alexandra M. Harrison Harrison, 2013-11-14 Autism Spectrum Disorder Perspectives from Psychoanalysis is written by practicing child psychoanalysts with extensive experience treating children with autistic spectrum disorders ASD and uneven development The authors bridge the gap between a psychodynamic approach to ASD and burgeoning data from the fields of neurobiology and neurofunction Based on current research showing neuroplasticity of the brain the authors posit that treating ASD through intensive engagement of caregiver and child makes possible the successful psychoanalytic treatment of a neurobiological disorder To this end the authors examine both the clinical dynamics of their treatments and the possible impact of the treatment on neurobiological processes Detailed case studies of children treated by the authors comprise the heart of the book The cases emphasize the importance of engaging these young children intensively with the social world first of their caregivers and then their peers while also helping child and caregiver make sense of the child's nonsense behavior through insight into their inner worlds The authors explain how and why such treatment works through examining the processes by which infant and caregiver learn to know each other and how a baby comes to know the world This approach emphasizes the intimate connection between infant and caregiver in forming the emotional cognitive attentional and interpersonal experiences that give a child the ability to make meaning and grow In addition this volume presents a selective summary of the neurobiological research in the area of ASD to provide the reader with the related neurobiological and psychological factors This underscores the thesis that ASD is a potentially reversible neurodevelopmental disorder with experiential and psychological consequences and lays groundwork for an integrated treatment approach with psychoanalysis at its core

Friendly, 1977 **Faith Isn't Blind** Patrick Ford, 2016-02-17 Popular culture constantly bombards us with the idea that modern scientific knowledge has rendered Christianity obsolete The common conception is that those who believe in God do so through blind faith a faith that is devoid of proof and in contrast with scientific knowledge However despite this perception there are multiple independent scholarly arguments that point toward the existence of a Christian God including the weakness of naturalism as an explanation for our world the congruency of God and modern science including evolution the cosmological argument and the beginning of the universe the intelligent design of our universe the existence of an objective moral law the secular sources that confirm the life and events of Jesus Christ the credibility of the New Testament and the historical evidence for the death and resurrection of Jesus Christ While belief in God is not an academic conclusion God did not leave us without any indications of his existence These independent arguments build a cumulative case that leads to the logical conclusion that God really does exist and therefore Faith Isn't Blind [More Stories and More](#) Derryl G.
