determine the response of gopher tortoises to forestry management practices commonly implemented in the management of the redcockaded woodpecker We monitored habitat use of individual tortoises at four study sites with different ownership and management scenarios Fort Gordon military installation winter burning Savannah River Site federal defense facility winter burning translocated population Tillman Sand Ridge state wildlife preserve summer burning and a private hunting preserve no management Habitat data were collected to characterize typical canopy and herbaceous vegetation of each site Data were collected at active burrows the anecdotal belief that tortoises select the most open habitat available was confirmed The preferred habitat density appears to be in the range of 40 percent canopy cover a value compatible with current woodpecker management guidelines Results will be used to develop recommendations for the concurrent management of gopher tortoises and red cockaded woodpeckers

Biology and Conservation of North American Tortoises David C. Rostal, Earl D. McCoy, Henry R. Mushinsky, 2014-08-01 The most comprehensive book ever published on North America's native tortoises. Tortoises, those unmistakable turtles evolved from a lineage that split off from the familiar pond turtles roughly 100 million years ago. Over time these plant-eating land turtles spread around the world, growing to an enormous size depending on the species and living so long that they have become the stuff of legends. By most accounts, they are indeed the longest-lived of the turtles, with good records suggesting individuals may live as long as 180 years; anecdotal records suggest that some reach ages of 200 years or more. Providing the first comprehensive treatment of North America's tortoises, *Biology and Conservation of North American Tortoises* brings together leading experts to give an overview of tortoise morphology, taxonomy, systematics, paleontology, physiology, ecology, behavior, reproduction, diet, growth, health, and conservation. The contributors carefully combine their own expertise and observations with results from studies conducted by hundreds of other researchers. The result is a book that belongs in the library of every herpetologist. Contributors: Gustavo Aguirre, Linda J. Allison, Matthew J. Aresco, Roy C. Averill, Murray Joan E. Berish, Kristin H. Land turtles, aquatic turtles, snappers, tortoises, and softshells. Features an identification guide to 22 North American species. Turtles are thought to be the oldest and most primitive of all living reptiles. This Wild Guide goes beyond the cursory knowledge that many people have about turtles, explaining the physical adaptations that allow a creature to live inside a hard protective shell. It explores the astonishing range of habitats occupied by different species of turtles in North America and examines feeding, reproduction, and hibernation in turtles. It gives tips on how to observe turtles and suggests ways in which people can help turtles survive and thrive in the wild. **Renewal of Authorization to Use Pinecastle Range, Ocala National Forest**, 2002 Destin Natural Gas Pipeline Project, Gulf of Mexico (AL, MS), 1997 **The 2012 Feasibility Study for Canaveral Harbor, Brevard County, Florida** United States.
