and deal with it so that it doesn't affect interviews. Everyone will get something from this book. But beyond the requisite information, it's simply a good read. And if you want another good read with stories galore, pick up Steve's other book, *Doorbells, Danger, and Dead Batteries*. Quite simply the best book on when, why, and how you should conduct user interview studies. Elizabeth F. Churchill, PhD, Senior Director, Google.

Who Should Read This Book: Anyone and everyone who is interested in finding out what makes their business tick, i.e., who their users are. Anyone and everyone who wants to learn how to interview and listen to people. Anyone and everyone, including CEOs, user researchers, designers, engineers, marketers, product managers, strategists, interviewers, and you.

Takeaways: User research is key for companies to include in their design and development process. The best way to do user research is through interviewing users and determining their needs. Interviewing can identify what could be designed or what is actually a problem. Teams who meet their users face to face will build better products. Field research takes a lot of preparation to be successful and a solid plan in advance. There are critical techniques and frameworks for mapping human behavior. A good interviewer always puts their participants at ease. If you ask the right questions, you'll get the right answers. A smart interviewer checks their worldview at the door. To establish a rapport with your interviewee, listen and don't be judgmental. Research data is a combination of analysis and synthesis. The importance of research analysis must be continually highlighted and emphasized to the powers that be.
