Applied Multivariate Analysis Ira H. Bernstein, 2012-12-06 Like most academic authors my views are a joint product of my

teaching and my research. Needless to say, my views reflect the biases that I have acquired. One way to articulate the rationale and limitations of my biases is through the preface of a truly great text of a previous era: Cooley and Lohnes (1971, p. v). They draw a distinction between mathematical statisticians whose intellect gave birth to the field of multivariate analysis such as Hotelling, Bartlett, and Wilks, and those who chose to concentrate much of their attention on methods of analyzing data in the sciences and of interpreting the results of statistical analysis and who are more interested in the sciences than in mathematics. Among other characteristics, I find the distinction between individuals who are temperamentally mathematicians, whom philosophy students might call Platonists, and scientists, Aristotelians, useful as long as it is not pushed to the point where one assumes mathematicians completely disdain data and scientists are never interested in contributing to the mathematical foundations of their discipline. I certainly feel more comfortable attempting to contribute in the scientist rather than the mathematician role. As a consequence, this book is primarily written for individuals concerned with data analysis. However, as noted in Chapter 1, true expertise demands familiarity with both traditions.

*Electronic Performance Support* Professor Paul van Schaik, Professor Philip Barker, 2012-10-01. Despite ubiquitous powerful technologies such as networked computers, global positioning systems, and cell phones, human failures in decision making and performance continue to have disastrous consequences. *Electronic Performance Support: Using Digital Technology to Enhance Human Ability* reminds everyone involved in education, training, human performance engineering, and related fields of the enormous importance of this area. Ironically, the more complex technology becomes, the more performance support may be needed, and that's why the extraordinary expertise shared in this book is especially valuable. The authors emphasize the psychological aspects of performance support: the fundamental limitations of human memory, perception, cognition, conation, and psychomotor skills, and how they can be reduced through electronic performance support as one of the most important pursuits of this century. Readers will find the material presented extremely useful because of its generic basis, which underlines much of the contemporary use of electronic technology for

supporting people who are engaged in problem solving activities At the same time the book gives examples of the application of electronic performance support in a number of specific domains Possible future developments for electronic performance support are also discussed The technological challenges we face today both globally and locally are more urgent than most people seem willing to acknowledge and there is no time to waste putting the ideas expressed in this book into action
