Guide To Web Application And Platform Architectures:

Guide to Web Application and Platform Architectures Stefan Jablonski, Ilia Petrov, Christian Meiler, Udo Mayer, 2004-08-05
New concepts and technologies are being introduced continuously for application development in the World Wide Web. Selecting the right implementation strategies and tools when building a Web application has become a tedious task requiring in-depth knowledge and significant experience from both software developers and software managers. The mission of this book is to guide the reader through the opaque jungle of Web technologies. Based on their long industrial and academic experience, Stefan Jablonski and his coauthors provide a framework architecture for Web applications which helps choose the best strategy for a given project. The authors classify common technologies and standards like NET, CORBA, J2EE, DCOM, WSDL and many more with respect to platform architectural layer and application package and guide the reader through a three-phase development process consisting of preparation, design, and technology selection steps. The whole approach is exemplified using a real-world case: the architectural design of an order entry management system. *Information Systems Development* Jaroslav Pokorný, Václav Repa, Karel Richta, Wita Wojtkowski, Henry Linger, Chris Barry, Michael Lang, 2011-09-02
Information Systems Development: Business Systems and Services Modeling and Development is the collected proceedings of the 19th International Conference on Information Systems Development held in Prague, Czech Republic, August 25-27, 2010. It follows in the tradition of previous conferences in the series in exploring the connections between industry, research, and education. These proceedings represent ongoing reflections within the academic community on established information systems topics and emerging concepts, approaches, and ideas. It is hoped that the papers herein contribute towards disseminating research and improving practice. Evaluation of Novel Approaches to Software Engineering Leszek Maciaszek, César González-Pérez, Stefan Jablonski, 2010-10-06
Software engineering is understood as a broad term linking science, traditional engineering art, and management and is additionally conditioned by social and external factors conditioned to the point that brilliant engineering solutions based on strong science showing artistic creativity and skillfully managed can still fail for reasons beyond the control of the development team. Modern software engineering needs a paradigm shift commensurate with a change of the computing paradigm from 1. Algorithms to interactions and from procedural to object-oriented programming 2. Systems development to systems integration 3. Products to services. Traditional software engineering struggles to address this paradigm shift to interactions, integration, and services. It offers only incomplete and disconnected methods for building information systems with fragmentary ability to dynamically accommodate change and to grow gracefully. The principal objective of contemporary software engineering should therefore be to try to redefine the entire discipline and offer a complete set of methods, tools, and techniques to address challenges ahead that will shape the information systems of the future. *Agents and Multi-agent Systems: Technologies and Applications 2024* Gordan Jezic, Y.-H. Chen-Burger, Mario Kušek, Roman Šperka, Robert J. Howlett, Lakhmi C. Jain, 2025-03-01
