Ross, 2013-11-11 In 1977 the current editors contributed a review article on behavioral group therapy to a volume of Hersen Miller and Eisler s Progress in Behavior Modification series 1977 At that time we noted that despite the advantages to both clinicians and clients of conducting behavioral treatments in groups clinical developments and research in this area were still at a relatively rudimentary level The majority of studies in the behavioral group therapy literature we reviewed reported the direct transfer of an individual behavior therapy procedure such as systematic desensitization to a group of clients with homogeneous problems such as snake phobia or test anxiety Groups were used in many studies merely to generate sufficient numbers of subjects to allow various types of interventions to be compared rather than to examine group process variables per se Only a limited amount of attention had been given to whether these group interaction variables such as group

discussion sharing ideas and feelings and mutual feedback and reinforcement might enhance individually oriented procedures applied in a group The 8 years since this original chapter was written have seen a significant growth in both the breadth and depth of clinical research and work in the behavioral group therapy field This growth was documented in part in a three volume series on behavioral group therapy by the current editors Upper Ross 1979 1980 1981 **The Wiley Handbook of Disruptive and Impulse-Control Disorders** John E.
