## **Guided Weapons:**

Weapons of Choice Paul G. Gillespie, 2006 History and deployment of smart weapons In the United States efforts to develop precision guided munitions PGMs began during the First World War and resulted in an aerial torpedo by the 1920s While World War II was dominated by large scale strategic bombing essentially throwing out tons of free falling munitions in the hope they hit something important both sides in the war worked to develop airborne munitions that could be steered toward a target However after that war U S national security policy focused on the atomic bomb hardly a weapon that needed to be directed with accuracy The cost of emphasis on atomic weapons was revealed in the general unsuitability of American tactics and weapons deployment systems during the Vietnam War Lessons learned in that conflict coupled with rapid technological developments in aerodynamics lasers and solid state electronics brought air power dramatically closer to the surgical strike now seen as crucial to modern warfare New technology created attractive choices and options for American policymakers as well as field commanders and events in the Arab Israeli wars the U S raid on Libya and most dramatically in the first Gulf War created an ever increasing demand for the precision weapons The prospect of pinpoint delivery of weapons right to the enemy's door by speeding aircraft seems to presage war in which the messy and politically risky deployment of ground troops is unnecessary The potential of such weapons and their strategic limitations made the Gulf War and Iraqi War living theater for assessing what such weapons can and cannot do and have important implications for planning for future warfare

Guided Missiles Alix Wood, 2015-12-15 Guided missiles have been used by militaries around the world since World War II Readers explore the history behind the developments in guided missile technology from the earliest uses of these weapons to the most advanced guided missiles used today Detailed text photographs and fact boxes provide readers with a comprehensive look at the impact guided missiles have had on modern warfare Readers also learn the countermeasures put in place to protect against the use of these weapons What guides these weapons The answers to this question and many more are found with each turn of the page

proceeds from the premise that throughout history humans have demonstrated a proclivity for using violence against one another as a means to achieve an end means enabled in many respects by the technologies available at the time Advancing technology has often been a prime enabler of ever increasing levels of violence and attendant human suffering At a few

junctures in history however certain technologies have seemingly provided the armed forces that possess them the ability to fight wars with decreasing levels of violence and suffering Today precision guided munitions PGMs with their high degree of discrimination and accuracy again hold such promise This book seeks to answer the question Do PGMs mitigate suffering in war and have these weapons changed the way decisions regarding war and peace have been made Answering this question helps us understand possible shifts in emphasis in modern warfare both in terms of methods employed and of the greater concern placed on limiting human suffering during conflict This book will help students of ethics just war and military history and senior military and civilian leaders to understand the possible outcomes and wider implications of their strategic choices to use such technology      *Precision-guided Weapons* James F. Digby, 1975 This paper was prepared for the Conventional Arms Control Policy Panel of the United Nations Association of the U S A It draws on a related paper prepared for the conference on The Impact of New Technologies on U S Defense Planning for Non Nuclear Conflict sponsored by the Fletcher School of Law and Diplomacy Tufts University held in Boston in the fall of 1974 The present paper deals much more extensively with the interrelation between the new precision weapons and theater nuclear warfare with the prospects for using the new technologies for the defense of smaller states with current trends in arms transfers and with prospects for new forms of conventional arms agreements      *Missiles, Rockets and Satellites* United States.
