Pigs Guinea pigs *Cavia porcellus* are tiny gregarious rodents that have been tamed for thousands of years These lovely animals originally from South America s Andes have become one of the most popular pets in the world adored for their kind temperament and lively personality History Origin Guinea pigs were initially domesticated by Andean indigenous peoples mostly for food and they are culturally significant in many South American communities They gradually evolved from a source of nourishment to cherished pets notably in Europe and North America Their attractiveness stems not just from their friendly temperament but also from their many breeds each with distinct physical traits like as varied coat kinds and colors

Physical characteristics Adult guinea pigs weigh 1.5 to 2.5 kg (3.5 to 5.5 pounds) and are around 20 to 25 cm (8 to 10 inches) long. They have a strong stocky build with a round face, short legs, and no tail. Their huge expressive eyes and ears add to their lovely look, making them a popular choice among little pet owners. Guinea pigs are noted for their vocalizations which vary from squeaks and purrs to chirps and whines, each conveying a particular feeling and need.

Behavior and Social Structure Guinea pigs are very sociable creatures that thrive in the company of their peers. In the wild, they live in groups to defend themselves from predators, and this tendency is still strong in domesticated situations. It is fairly rare for them to build attachments to their human caretakers, recognizing voices and reacting to familiar noises. Their curious nature drives them to investigate their surroundings, and they often engage in recreational activities such as popcorning (a joyful jump into the air).
