Hume, 1996-06-01 This thesis describes an attack helicopter module for the Joint Warfare Analysis Experimental Prototype JWAEF a joint theater level low resolution stochastic simulation developed at the Naval Postgraduate School The modeling formulations required data and assumptions which are required to portray attack helicopter operations in theater level simulations are presented The focus for the attack module is the representation of attack helicopter units in the conduct of deliberate attacks however many of the models described can be applied to general helicopter operations The formulations are limited to the major events that occur during an attack helicopter deliberate attack and represent initial research to portray attack helicopter operations in JWAEF **A Simulation Investigation of Scout/attack Helicopter Directional Control Requirements for Hover and Low-speed Tasks**, 1987 Helicopter Gunships: Deadly Combat Weapon Systems Wayne Mutza, 2010-09 Helicopter Gunships begins with the Vietnam War as the ultimate proving ground that first utilized helicopter gunships and saw the development of other rotary wing weapons systems as well It also explores fascinating post war programs like the experimental Comanche Blackhawk and Apache Tactics, Techniques, and Procedures for the Attack Helicopter Battalion United States. reasonable pilot workload levels as stable platforms for target designation and or weapon delivery at night and in adverse weather is a major interest of the U S Army Aeromechanics Laboratory Two candidate techniques under investigation are 1 helicopters control system modifications that alter the aircraft s response to pilot control inputs and to external inputs such as turbulence and 2 variations in the methods of which critical information is displayed to the pilot in an attempt to reduce the effort required to interpret and respond to a given situation while still maintaining a satisfactory level of system performance In support of this research a piloted simulator experiment was designed and conducted to assess the effects on overall system performance and pilot workload of variations in control system characteristics and display format and logic for a nighttime attack helicopter mission This paper describes the experiment and presents major results and conclusions Author
